**Predicting Outcomes of Investments in Maintenance and Repair of Federal Facilities Oct 13 2020 The deteriorating condition of federal facilities poses economic, safety, operational, and environmental risks to the federal government, to the achievement of the missions of federal agencies, and to the achievement of public policy goals. Primary factors underlying this deterioration are the age of federal facilities-about half are at least 50 years old-and decades of inadequate investment for their maintenance and repair. These issues are not new and there are no quick fixes. However, the current operating environment provides both the impetus and the opportunity to place investments in federal facilities' maintenance and repair on a new, more sustainable course for the 21st Century. Despite the magnitude of investments, funding for the maintenance and repair of federal facilities has been inadequate for many years, and myriad projects have been deferred. Predicting Outcomes of Investments in Maintenance and Repair of Federal Facilities identifies processes and practices for transforming the current portfolio of federal facilities into one that is more economically, physically, and environmentally sustainable. This report addresses ways to predict or quantify the outcomes that can be expected from a given level of maintenance and repair investments in federal facilities or facilities' systems, and what strategies, measures, and data should be in place to determine the actual outcomes of facilities maintenance and repair investments.**

**Performance Theatre and the Poetics of Failure Sep 23 2021 What does it mean to "fail" in performance? How might staging failure reveal theatre's potential to expand our understanding of social, political and everyday reality? What can we learn from performances that expose and then celebrate their ability to fail? In Performance Theatre and the Poetics of Failure, Sara Jane Bailes begins with Samuel Beckett and considers failure in performance as a hopeful strategy. She examines the work of internationally acclaimed UK and US experimental theatre companies Forced Entertainment, Goat Island and Elevator Repair Service, addressing accepted narratives about artistic and cultural value in contemporary theatre-making. Her discussion draws on examples where misfire, the accidental and the intentionally amateur challenge our perception of skill and virtuosity in such diverse modes of performance as slapstick and punk. Detailed rehearsal and performance analysis are used to engage theory and contextualise practice, extending the dialogue between theatre arts, live art and postmodern dance. The result is a critical account of performance theatre that offers essential reading for practitioners, scholars and students of Performance, Theatre and Dance Studies.**

**Arch Bridges Jul 22 2021 Modern structural engineering surprises us with the mastery and certainty with which it plans and carries out daring projects, such as the most recent metal or concrete bridges, whether they be suspension or arch bridges. On the other hand, little is yet known about the state of knowledge of construction science and techniques which, well before the arrival of modern methods based on the mechanics of deformable continua, made it possible in the past to erect the vaulted masonry structures that we have inherited. The fact that these have lasted through many centuries to our time, and are still in a fairly good state of conservation, makes them competitive, as far as stability and durability are concerned, with those constructed in other materials. Although it is known that the equilibrium of the arch is guaranteed by any funicular whatsoever of the loads, contained inside the profile of an arch, finding the unique solution is not such a certainty. In other words, the problem of the equilibrium of vaulted structures is 'Poleni's problem', the one for which the Venetian scientist was able to give an exemplary solution on the occasion of the assessment of the dome of St. Peter's. Arch Bridges focuses on the main aspects of the debate about the masonry arch bridge: History of structural mechanics and construction, theoretical models, analysis for assessment, numerical methods, experimental and non-destructive testing, maintenance and repair are the topics of the Conference. The breadth and variety of the contributions presented and discussed by leading experts from many countries make this volume an authoritative source of up-to-date information.**
