Essential College Physics

Aug 30 2019 Brief Description:

The goal of Essential College Physics is to provide a book focused on essential principles- a shorter, more focused book that better addresses the learning needs of today's readers while more effectively guiding them through the mastery of physics. Brevity does not need to come at the expense of reader learning. This book is designed from the ground up to be concise and focused, resulting in a book less intimidating and easier to use, with well-coordinated explanations, art, worked examples, and end-of-chapter problems. It incorporates an overarching connected approach: connecting ideas within and across chapters; connecting physics with the real world; connecting words and math; and connecting with how today's readers learn and

how they use their book. In addition to providing a strong foundation that teaches physics principles, the book also focuses on building readers' problem-solving skills. The friendly, integrated approach, combined with the low price, makes Essential College Physics an invaluable book choice. Key Topics:

Measurements in Physics, Motion in One Dimension, Motion in Two Dimensions, Force and Newton's Laws of Motion, Work and Energy, Momentum and Collisions, Oscillations, Rotational Motion, Gravitation, Solids and Fluids, Waves and Sound, Temperature, Thermal Expansion, and Ideal Gases, Heat, The Laws of Thermodynamics, Electric Charges, Forces, and Fields, Electric Energy, Potential, and Capacitors, Electric Current, Resistance, and Circuits, Magnetic Fields and Forces,

unfamiliar foods. Drawing from

the latest research, the book

describes which homeopathic

medicines work best against

infectious diseases, such as

malaria, hepatitis, and Lyme

disease, and details remedies

for injuries sustained while

backpacking, climbing, or

diving. Roy and Lage-Roy also

explain how to treat stings and

bites from poisonous animals

and reactions from plants like

poison ivy. An introductory

chapter features a basic

traveler's first-aid kit.

Spiritual Purification in

Islam Dec 15 2020 Purification of the soul is a principle that is central to understanding Islamic spirituality but despite this, relatively little has been written explicitly in the Islamic

tradition regarding this discrete method of spiritual purification. This book examines the work of a scholar of this discipline, al-Hārith al-Muhāsibī, who lived and worked during the classical Islamic period under the Abbāsids. Although al-Muhāsibī was well known for his skills in many disciplines, including the Qur’ān, Prophetic narration and scholastic theology, it is his mastery in the field of Islamic spirituality and moral psychology for which he is best remembered. Assessing the extent to which the political, social and economic factors played a part in his life and work, Gavin Picken provides a comprehensive overview of his work and its great significance in the development of Islamic spirituality. Reconstructing his life in chronological order and providing the most comprehensive appraisal of his works to date, it explores a facet of al-Muhāsibī’s teaching which as yet has not been studied, namely his understanding, concept and methodology regarding the

Typhoon May 08 2020 Observing the steady fall of the barometer, Captain MacWhirr thought, "There's somedirty weather knocking about." This is precisely what he thought. He had had an experienceof moderately dirty weather—the term dirty as applied to the weather implying onlymoderate discomfort to the seaman. Had he been informed by an indisputable authoritythat the end of the world was to be finally accomplished by a catastrophic disturbance ofthe atmosphere, he would have assimilated the information under the simple idea of dirtyweather, and no other, because he had no experience of cataclysms, and belief does notnecessarily imply comprehension. The wisdom of his county had pronounced by means ofan Act of Parliament that before he could be considered as fit to

of a ship he should be able to answer certain simple questions on the subject of circular storms such as hurricanes, cyclones, typhoons; and apparently he had answered them, since he was now in command of the Nan-Shan in the China seas during the season of typhoons. But if he had answered he remembered nothing of it. He was, however, conscious of being made uncomfortable by the clammy heat. He came out on the bridge, and found no relief to this oppression. The air seemed thick. He gasped like a fish, and began to believe himself greatly out of sorts. The Nan-Shan was ploughing a vanishing furrow upon the circle of the sea that had the surface and the shimmer of an undulating piece of gray silk. The sun, pale and without rays, poured down leaden heat in a strangely indecisive light, and the Chinamen were lying prostrate about the decks. Their bloodless, pinched, yellow faces were like the faces of bilious invalids. Captain MacWhirr noticed two of them

especially, stretched out on their backs below the bridge. As soon as they had closed their eyes they seemed dead. Three others, however, were quarrelling barbarously away forward; and one big fellow, half-naked, with herculean shoulders, was hanging limply over a winch; another, sitting on the deck, his knees up and his head drooping sideways in a girlish attitude, was plaiting his pigtail with infinite languor depicted in his whole person and in the very movement of his fingers. The smoke struggled with difficulty out of the funnel, and instead of streaming away spread itself out like an infernal sort of cloud, smelling of sulphur and raining soot all over the decks. "What the devil are you doing there, Mr. Jukes?" asked Captain MacWhirr. This unusual form of address, though mumbled rather than spoken, caused the body of Mr. Jukes to start as though it had been prodded under the fifth rib. He had had a low bench brought on the bridge, and sitting on it, with

of rope curled about his feet and a piece of canvas stretched over his knees, was pushing a sail-needle vigorously. He looked up, and his surprise gave to his eyes an expression of innocence and candour

Data Just Right Mar 06 2020 Making Big Data Work: Real-World Use Cases and Examples, Practical Code, Detailed Solutions Large-scale data analysis is now vitally important to virtually every business. Mobile and social technologies are generating massive datasets; distributed cloud computing offers the resources to store and analyze them; and professionals have radically new technologies at their command, including NoSQL databases. Until now, however, most books on "Big Data" have been little more than business polemics or product catalogs. Data Just Right is different: It's a completely practical and indispensable guide for every Big Data decision-maker, implementer, and strategist. Michael Manoochehri, a former Google engineer and data

hacker, writes for professionals who need practical solutions that can be implemented with limited resources and time. Drawing on his extensive experience, he helps you focus on building applications, rather than infrastructure, because that's where you can derive the most value. Manoochehri shows how to address each of today's key Big Data use cases in a cost-effective way by combining technologies in hybrid solutions. You'll find expert approaches to managing massive datasets, visualizing data, building data pipelines and dashboards, choosing tools for statistical analysis, and more. Throughout, the author demonstrates techniques using many of today's leading data analysis tools, including Hadoop, Hive, Shark, R, Apache Pig, Mahout, and Google BigQuery. Coverage includes Mastering the four guiding principles of Big Data success—and avoiding common pitfalls Emphasizing collaboration and avoiding problems with siloed data Hosting and sharing

Birds of Belize Jul 10 2020

“Fills a major gap in the bird identification literature . . . A must for birders planning a trip to this friendly patch of Central America.” —The Curious Naturalist With nearly six hundred identified species of birds—and an average of five “new” species discovered annually—Belize is becoming a birding hotspot for amateur and professional birders from around the globe. Thousands of birders visit the country each year to enjoy Belize’s amazing abundance and variety of both temperate and tropical birds in natural habitats that remain largely unspoiled. But until now, despite the growing need for an authoritative identification guide, birders have had to rely on regional field guides that offer only limited information on Belizean birds. Birds of Belize provides the first complete guide to the identification of all currently known species—574 in all. The birds are grouped by families, with an introduction to each family that highlights its uniquely identifying

Embryo Culture Feb 14 2021 "Injections + Appointments + Egg Retrieval + Embryo Transfer = Resources (Energy x Time x Emotion)" That's the equation that was projected onto the screen when Beth Kohl and her husband first showed up at the in vitro fertilization (IVF) clinic. "Good evening," the program's psychologist told the gathered infertile couples. "Before you begin your treatment, you should know that this program is emotionally and psychologically stressful." how. In this marvelously unconventional account of her struggles to bear children, Kohl leads the reader on an oh-so-up-close tour of fertilization in America, and the ways in which science and miracle, technology and faith, converge to create life in the twentyfirst century. Along the way, Kohl wrestles with a new world of medical ethics: Should she "selectively reduce" the number of embryos successfully implanted in the womb in order to prevent a potentially complicated pregnancy? How much genetic testing of fertilized eggs is too much? What is she supposed to do with the seven embryos left over from the IVF process? When Andrew Solomon wrote *The Noonday Demon*, he opened the world of depression to readers as no writer had done before. And when Stephen L. Carter wrote *Reflections of an Affirmative Action Baby*, many readers were forced to completely rethink race and prejudice. Kohl's spirited and rich exploration of "embryo culture"

will completely revise how we see modern motherhood.

Introduction to Laser

Technology Jun 08 2020 The only introductory text on the market today that explains the underlying physics and engineering applicable to all lasers Although lasers are becoming increasingly important in our high-tech environment, many of the technicians and engineers who install, operate, and maintain them have had little, if any, formal training in the field of electro-optics. This can result in less efficient usage of these important tools. Introduction to Laser Technology, Fourth Edition provides readers with a good understanding of what a laser is and what it can and cannot do. The book explains what types of laser to use for different purposes and how a laser can be modified to improve its performance in a given application. With a unique combination of clarity and technical depth, the book explains the characteristics

and important applications of commercial lasers worldwide and discusses light and optics, the fundamental elements of lasers, and laser modification.? In addition to new chapter-end problems, the Fourth Edition includes new and expanded chapter material on: Material and wavelength Diode Laser Arrays Quantum-cascade lasers Fiber lasers Thin-disk and slab lasers Ultrafast fiber lasers Raman lasers Quasi-phase matching Optically pumped semiconductor lasers Introduction to Laser Technology, Fourth Edition is an excellent book for students, technicians, engineers, and other professionals seeking a fuller, more formal introduction to the field of laser technology.
