*Climate Change Economics and
Policy* Mar 28 2020 What are
the potential adverse impacts
of climate change? How can

society determine the amount of protection against climate change that is warranted, given the benefits and costs of various policies? In concise, informative chapters, *Climate Economics and Policy* considers the key issues involved in one of the most important policy debates of our time. Beginning with an overview and policy history, it explores the potential impact of climate change on a variety of domains, including water resources, agriculture, and forests. The contributors then provide assessments of policies that will affect greenhouse gas emissions, including electricity restructuring, carbon sequestration in forests, and

early reduction programs. In considering both domestic and international policy options, the authors examine command and control strategies, energy efficiency opportunities, taxes, emissions trading, subsidy reform, and inducements for technological progress. Both policymakers and the general public will find this volume to be a convenient and authoritative guide to climate change risk and policy. It is a useful resource for professional education programs, and an important addition for college courses in environmental economics and environmental studies. *Climate Economics and Policy* is a collection of Issue Briefs, prepared by the staff of

Resources for the Future (RFF) and outside experts. Many are adapted from pieces originally disseminated on Weathervane, RFF's acclaimed web site on global climate change. *Economics* Dec 29 2022 Aims to teach students how economics really works in the world. [Trade, Currencies, and Finance](#) Dec 17 2021 The book includes selected papers of Morris Goldstein on the following topics in international macroeconomics: international trade, currency regimes, exchange rate policy, international policy coordination, banking, financial crises, financial regulation, IMF policies, and China's

exchange rate policy. Some of the papers are empirical in nature, while others address key policy issues in international macroeconomics. Many of the papers are co-authored with other well-known international economists, including Jacob Frenkel, Mohsin Khan, Nicholas Lardy, Peter Montiel, Michael Mussa, Carmen Reinhart, and Philip Turner, among others. Taken as a group, the papers should give the reader a good picture of many of the most important issues in international macroeconomics over the past 35 years.

Nanoindentation Nov 16 2021 Mechanical engineering, an engineering discipline borne of the needs of the industrial revolution, is once again asked to do its substantial share in the call for industrial renewal. The general call is urgent as we face profound issues of

productivity and competitiveness that require engineering solutions, among others. The Mechanical Engineering Series features graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering. The series is conceived as a comprehensive one that covers a broad range of concentrations important to mechanical engineering graduate education and research. We are fortunate to have a distinguished roster of consulting editors on the advisory board, each an expert in one of the areas of concentration. The names of

the consulting editors are listed on the facing page of this volume. The areas of concentration are: applied mechanics; biomechanics; computational mechanics; dynamic systems and control; energetics; mechanics of materials; processing; thermal science; and tribology.

Fintech Business Models

May 30 2020 This book on fintechs shows an international comparison on a global level. It is the first book where 10 years of financing rounds for fintechs have been analyzed for 10 different fintech segments. It is the first book to show the Canvas business model for fintechs. Professionals and students get a global

understanding of fintechs. The case examples in the book cover Europe, the U.S. and China. About the author: Matthias Fischer is professor of finance and banking at the Institute of Technology Nuremberg Georg-Simon-Ohm in Germany. His research has focused on strategy and M&A in the banking sector, value-based management, robo-advisory and fintechs. Dr. Fischer also serves as a member of the Groupe de Recherche en Management at the IAE Nice Graduate School of Management, Université Côte d'Azur in France. He is internationally active as a strategy and financial advisor. Reviews of the book: FinTech is

not the next "big thing." It is the big thing now! FinTech is the new business model for the global financial sector, offering clear and enormous potential for vast economies of scale and scope, massive cost savings and efficiency gains, significant risk reduction, and opening the door to banking for literally billions of currently unbanked people. Professor Fischer has done a masterful job of expertly and informatively taking us through all aspects of the revolutionary new FinTech business models. Using state-of-the-art research techniques, he insightfully shows us how FinTech firms are financed and how they aspire to create value. His in-depth case studies

unlock the keys to success in the FinTech sector. His fascinating book is a "must read" for all financial professionals. Dr. Stephen Morrell, Professor of Economics and Finance, Andreas School of Business, Barry University, Miami, USA Matthias Fischer's latest book offers a comprehensive overview of Fintech business models around the world. With a very pedagogical approach, and in a particularly fluid style, the author takes us into the strategic logics of these new entrants to finance, who are carriers of innovation and sometimes of disruption, and whose strategies are focused on the need to always meet the

emerging expectations of their customers. This precise and well-documented analysis should enable banks to reposition themselves in their ecosystem by studying these new business models, which will enable them to boost their growth. Professor Dr. Nadine Tournois, Dean of IAE Nice Graduate School of Management, Université Côte d'Azur, France, Chevalier de la Légion d'honneur Fintech Business Models is a must-have book to understand the rapid and intense changes occurring in the financial sector. New technologies have allowed the birth of new financial species, such as Fintech, more adapted to the new digital economy.

The content dedicated to the application of blockchain technology helps to understand its opportunities in the financial sector, not only in the means of payment and cryptoactives, but also in how blockchain can make multiple internal processes improve, allowing to optimize the management, efficiency and even security of operations. Without any doubt, this book offers an extraordinary vision of how the fintech sector has become a catalyst for change in banking in the context of the current Digital Society. Phd. Ricardo Palomo, Full Professor of Finance, Deputy Chancellor for Digital Transformation at Universidad CEU San Pablo,

Madrid, Spain and member of the Board of Alastria Blockchain Ecosystem This book provides a detailed and original overview of the most important fintech business models in the major global markets. Through a savvy use of the well-known Business Model Canvas methodology, the author explores the unique ecosystem, business model's components, and sources of competitive advantage of successful fintech firms. The book, in particular, offers an insightful and comprehensive analysis of the winning and losing strategies and performances of fintech firms by segment of activity such as, instant digital payments, crowd-funding, robo-

advisory, alternative finance, credit & factoring, social trading, personal finance management, blockchain and cryptocurrencies. It is indeed a very unique and valuable study on the fintech industry, its trends, and its emerging business models. Prof. Ivo Pezzuto, The International School of Management, Paris, France and Adjunct Professor of International Business and Strategic Management Università Cattolica del Sacro Cuore, Department of Business Management, Milan, Italy The emergence of fintechs is one of the most relevant drivers of change in the financial services industry. The book presented here delivers an impressive

overview of fintechs" activity areas, business models and funding patterns. The book reflects the state of the art of the current fintech world. Prof. Dr. Jürgen Moormann, Professor of Bank and Process Management at Frankfurt School of Finance & Management, Germany
Fischer Black and the Revolutionary Idea of Finance
Sep 26 2022 praise for FISCHER BLACK AND THE REVOLUTIONARY IDEA OF FINANCE "The story of Fischer Black. . . is remarkable both because of the creativity of the man and because of the revolution he brought to Wall Street. . . Mehrling's book is fascinating." —FINANCIAL

TIMES "A fascinating history of things we take for granted in our everyday financial lives." —THE NEW YORK TIMES
"Mehrling's book is essential reading for anyone interested in the development of modern finance or the life of an idiosyncratic creative genius." —PUBLISHERS WEEKLY
"Fischer Black was more than a vital force in the development of finance theory. He was also a character. Perry Mehrling has captured both sides of the picture: the evolution of thinking about the pricing of risk and time, as well as the thinkers, especially this fascinating eccentric, who worked it out." —ROBERT M. SOWLO, Nobel laureate and

Institute Professor of Economics, Emeritus, Massachusetts Institute of Technology "Although I worked closely with Fischer for nine years at Goldman Sachs and clearly recognized both his genius and the breadth and originality of his ideas, until I read this book, I had only the vaguest grasp of the source of his inspiration and no understanding at all of the source of his many idiosyncrasies." —BOB LITTERMAN, Partner, Kepos Capital "Perry Mehrling has done a remarkable job of tracing the intellectual and personal development of one of the most original and complex thinkers of our generation.

Fischer Black deserved it: a charming and brilliant book about a charming and brilliant man." —ROBERT E. LUCAS JR., Nobel laureate and Professor of Economics, The University of Chicago

The Good Life Aug 21 2019

What could middle-class German supermarket shoppers buying eggs and impoverished coffee farmers in Guatemala possibly have in common? Both groups use the market in pursuit of the "good life." But what exactly is the good life? How do we define wellbeing beyond material standards of living? While we all may want to live the good life, we differ widely on just what that entails. In *The Good Life*,

Edward Fischer examines wellbeing in very different cultural contexts to uncover shared notions of the good life and how best to achieve it. With fascinating on-the-ground narratives of Germans' choices regarding the purchase of eggs and cars, and Guatemalans' trade in coffee and cocaine, Fischer presents a richly layered understanding of how aspiration, opportunity, dignity, and purpose comprise the good life.

The Handbook of Economic Development and Institutions
Feb 25 2020 "The essential role institutions play in understanding economic development has long been recognised and has been

closely studied across the social sciences but some of the most high profile work has been done by economists many of whom are included in this collection covering a wide range of topics including the relationship between institutions and growth, educational systems, the role of the media and the intersection between traditional systems of patronage and political institutions. Each chapter covers the frontier research in its area and points to new areas of research and is the product of extensive workshopping and editing. The editors have also written an excellent introduction which brings together the key themes

of the handbook. The list of contributors is stellar (Steven Durlauf, Throsten Beck, Bob Allen, and includes a diverse mix of Western and non Western, male and female scholars)"

Handbook of International Economics Jun 30 2020 This Handbook adopts a traditional definition of the subject, and focuses primarily on the explanation of international transactions in goods, services, and assets, and on the main domestic effects of those transactions. The first volume deals with the "real side" of international economics. It is concerned with the explanation of trade and factor flows, with their main effects on goods and

factor prices, on the allocation of resources and income distribution and on economic welfare, and also with the effects on national policies designed explicitly to influence trade and factor flows. In other words, it deals chiefly with microeconomic issues and methods. The second volume deals with the "monetary side" of the subject. It is concerned with the balance of payments adjustment process under fixed exchange rates, with exchange rate determination under flexible exchange rates, and with the domestic ramifications of these phenomena. Accordingly, it deals mainly with economic issues, although microeconomic methods are

frequently utilized, especially in work on expectations, asset markets, and exchange rate behavior. For more information on the Handbooks in Economics series, please see our home page on <http://www.elsevier.nl/locate/hes>

Ukraine at the Crossroads Jun 23 2022 Axel Siedenberg, Lutz Hoffmann 1 The specificity of transformation in Ukraine When the Soviet empire collapsed in the very early 1990s, the new era that dawned was commonly given the name 'transformation',

implying the systemic change from socialism towards some form of market economy. Almost ten years later, 'the' transformation process does not exist any more; instead, a whole variety of transformations are taking place in Eastern Europe and the CIS: Whereas some countries are heading towards EU membership (e. g. Poland), others are still pondering on what economic system to adopt (e. g. Russia) and yet others have rejected a market-oriented transformation outright (e. g. Belarus). Within this variety of transformations, Ukraine clearly stands out as a specific case: Whilst initially considered to be one of the

stronger post-Soviet Republics, it descended into economic depression in 1992 and has hardly recovered since; on the other hand, once considered to be a potential centre of ethnic unrest and political instability, it has turned into a democratic, peaceful civil society that is firmly establishing itself within the new European and world order. This book takes a critical look at economic reform in Ukraine as compared to other East European and CIS countries. Our hypothesis is that Ukraine is going through a transformation process peculiar to itself, which can be traced at both macroeconomic and microeconomic level.

Growth, Trade and

Endogenous Technology Apr 28 2020 What part does technological knowledge accumulation play in modern economic growth? This book investigates and examines the predictions of new growth theory, using OECD manufacturing data. Its empirical findings portray a novel and complex picture of the features of long-term growth, where technological knowledge production and diffusion play a central part, alongside variations in capital and employment. A parallel examination of long-run trade patterns and government policy issues completes a broader account of how knowledge-based growth in industrial

output is at the heart of modern economic prosperity. Rethinking Economics Oct 15 2021 Economics is a broad and diverse discipline, but most economics textbooks only cover one way of thinking about the economy. This book provides an accessible introduction to nine different approaches to economics: from feminist to ecological and Marxist to behavioural. Each chapter is written by a leading expert in the field described and is intended to stand on its own as well as providing an ambitious survey that seeks to highlight the true diversity of economic thought. Students of economics around the world have begun to demand a more open

economics education. This book represents a first step in creating the materials needed to introduce new and diverse ideas into the static world of undergraduate economics. This book will provide context for undergraduate students by placing the mainstream of economic thought side by side with more heterodox schools. This is in keeping with the Rethinking Economics campaign which argues that students are better served when they are presented with a spectrum of economic ideas rather than just the dominant paradigm. Rethinking Economics: An Introduction to Pluralist Economics is a great entry-level economics textbook

for lecturers looking to introduce students to the broader range of ideas explored within the economics profession. It is also appropriate and accessible for people outside of academia who are interested in economics and economic theory.

Macroeconomic and Monetary Policy Issues in Indonesia Dec 05 2020

Following the acquisition of its sovereignty from the Netherlands in 1949, Indonesia experienced serious economic and political problems during the 1950s and 1960s, before entering a three-decade-long period of rapid economic growth. Hard-hit by the

financial crisis of the late 1990s, Indonesia undertook a wide range of economic and financial reforms. These reforms served to prepare it well for the 2007-08 global financial crisis, through which Indonesia passed relatively unscathed. Drawing on empirical research, this book presents a comprehensive empirical study on the key macroeconomic relations and monetary policy issues in Indonesia. The book analyses monetary, fiscal and exchange-rate policies, looking at their interactions and impacts on the economy. It demonstrates how important macroeconomic management for monetary and financial stability is to

sustained national economic growth and development. Data from the 1970s is compared and contrasted with 1950s data to analyse macroeconomic policies and issues in an historical context. Statistical and econometric techniques are juxtaposed with general empirical results to supplement informative discussion of macroeconomic and monetary developments. This book is a useful contribution to studies on macroeconomics and international development, as well as Southeast Asian studies.

The Great Wave Feb 19 2022 Fischer has examined price records in many nations, and finds that great waves of rising prices in the 13th-, 16th-, 18th-, and 20th centuries were all marked by price swings of increasing volatility, falling wages, a growing gap between rich and poor, and an increase in violent crime, family disintegration, and cultural despair. 109 graphs & charts. 7 maps.

responsible manner? How can

we most efficiently transform

natural gas, coal, or biomass

into diesel, jet fuel or gasoline

to drive our machines? The Big

Questions today are

energyrelated, and the Fischer-

industrially tested solutions.

This book offers a

comprehensive and up-to-date

overview of the Fischer-

Tropsch process, from the

to commercial issues. It covers

industrial, economic, environmental, and fundamental aspects, with a specific focus on 'green' concepts such as sustainability, process improvement, waste-reduction, and environmental care. The result is a practical reference for researchers, engineers, and financial analysts working in the energy sector, who are interested in carbon conversion, fuel processing or synthetic fuel technologies. It is also an ideal introductory book on the Fischer-Tropsch process for graduate courses in chemistry and chemical engineering.

Fischer Black deserved it: a charming and brilliant book about a charming and brilliant man." —ROBERT E. LUCAS JR., Nobel laureate and Professor of Economics, The University of Chicago International Economics Dec 25 2019 There is no lack of good international economics textbooks ranging from the elementary to the advanced, so

that an additional drop in this ocean calls for an explanation. In the present writer's opinion, there seems still to be room for a textbook which can be used in both undergraduate and graduate courses, and which contains a wide range of topics, including those usually omitted from other textbooks. These are the intentions behind the present book, which is an outcrop from undergraduate and graduate courses in international economics that the author has been holding at the University of Rome since 1974, and from his on going research work in this field. Accordingly the work is organized as two-books in-one by distributing the material

between text and appendices. The treatment in the body of this book is directed to undergraduate students and is mainly confined to graphic analysis and to some elementary algebra, but it is assumed that the reader will have a good knowledge of basic microeconomics and macroeconomics (so that the usual review material on production functions, indifference curves, standard Keynesian model, etc. , etc. has been omitted) . Each chapter is followed by an appendix in which the treatment is mainly mathematical, and where (i) the topics explained in the text are treated at a level suitable for advanced undergraduate or

first-year graduate students and (ii) generalizations and/or topics not treated in the text (including some of those at the frontiers of research) are formally examined.

Mapping European Economic Integration Jun 11 2021 By examining the various policy subfields of European economic integration such as agriculture, trade, banking, economic governance and sustainability this book offers a comprehensive and wide-ranging analysis of developments that have taken place in the past five years aimed at exploring the path of economic integration in Europe.

Fisheries Economics, Volume I

Jan 18 2022 This title was first published in 2002: This important collection of international research on fisheries economics offers a comprehensive source of contemporary research on key topics in the field, as well as presenting the history of how the economic theory of fisheries exploitation has developed. Bringing into focus a wide range of inquiry, this volume concentrates most particularly on the traditional economic problem of optimal resource allocation. Individual papers examine fundamental issues including, the lack of

efficiency of open access and the specification of exactly what dynamic efficiency entails. Fisheries Economics is an invaluable research reference collection for the libraries of academic and other professional economists, as well as an indispensable resource for those studying across the fields of natural resources, fisheries economics and particularly fisheries management.

Debates in Macroeconomics from the Great Depression to the Long Recession Nov 04 2020

This book assesses major schools of thought in macroeconomic theory between the Great Depression and the Long Recession,

focusing on their analysis of cycles, crises and macro-policy. It explores the road from the dominance of Keynesian ideas to those of New Classical Macroeconomics (NCM) toward the end of the millennium. The book covers the early influential work of Knut Wicksell; the economic debates of the 1930s, with core contributions from John Maynard Keynes and Friedrich von Hayek; the rise of Keynesianism in the 1950s and its decline since the 1970s; the rise of Monetarism in the 1960s; and NCM's subsequent rise to prominence. Finally, the book outlines how macroeconomics has evolved from its birth in the 1930s as a

theory separate from microeconomics, resulting in a split between macro- and micro-theories, and ended up with a new hegemonic paradigm based on microfoundations. The ensuing policy thinking witnessed a transformation from "active" macro-policy after the Great Depression to a far more "passive" macro-policy during the last quarter of the twentieth century, which may have contributed to missing the signs of the impending Long Recession of 2008. "When the 2008 crisis struck, macroeconomists were caught with models that were theoretically elegant yet inappropriate to the needs of

the moment. A broader historical perspective may have prevented the jettisoning of Keynesian models that had proved useful in the past and might have done so again. This highly readable book by Arie Arnon is a wonderful antidote to economists' short time horizon and contributes mightily to restore the profession's "collective memory" of the diversity of ideas within macroeconomics." Professor Dani Rodrik, Harvard Kennedy School.

Resource and Environmental Economics
Mar 08 2021 This book

presents the major themes of the economic literature on natural resources and the environment. It is designed to bring the reader, in part with the aid of a unified model of optimal resource use, to the frontiers of the discipline, using only elementary mathematical models. Features special to exhaustible and renewable resources, including the problems posed by market imperfections, are treated as extensions of the basic model. The theoretical discussion is enriched with examples and applications, including a systematic investigation of the behaviour of resource reserves, costs, prices, and substitution possibilities. Substantial

attention to environmental, as well as extractive, resources is a distinctive aspect of this book. The author describes methods of estimating the environmental costs of resource development and other projects, and presents some key empirical findings. Policy instruments to protect the environment, such as taxes,

subsidies, marketable permits, and direct controls, are carefully analysed from a welfare-theoretic point of view. **Economics** Aug 01 2020
