Constructing Research Questions Oct 25 2021 All researchers want to produce interesting and influential theories. A key step in all theory development is formulating innovative research questions that will result in interesting and significant research. Traditional textbooks on research methods tend to ignore, or gloss over, actual ways of constructing research questions. In this text,

Alvesson and Sandberg develop a problematization methodology for identifying and challenging the assumptions underlying existing theories and for generating research questions that can lead to more interesting and influential theories, using examples from across the social sciences. Established methods of generating research questions in the social sciences tend to focus on 'gap-spotting', which means that existing literature remains largely unchallenged. The authors show the dangers of conventional approaches, providing detailed ideas for how one can work through such problems and formulate novel research questions that challenge existing theories and produce more imaginative empirical studies. Constructing Research Questions is essential reading for any researcher looking to formulate research questions that are interesting and novel.

Crafting Qualitative Research Questions Jun 28 2019 The essence of research design is the ability to articulate your research question. The research question is the precursor to the study, and a well-crafted question encapsulates all of the design elements for that study. Based on more than 20 years of conducting research, collaborating with colleagues to formulate research projects, and experience advising doctoral students, author Dr. Elizabeth (Betsy) A. Baker forged a research design heuristic which she introduces in this book. She starts by dissecting the anatomy of a qualitative research question, outlines the role of paradigms in research design, describes strategies to use the anatomy as a design heuristic, and provides sample cases that track the decisions two researchers made while formulating a qualitative question. The book concludes with advice on how to move from the research question to the proposal. Throughout, the author provides handy worksheets that readers can complete as they work on crafting their own research question.

Critical Approaches to Questions in Qualitative Research Jun 08 2020 Learning how to formulate questions that examine the power relations between the researcher and participants is at the heart of critical approaches. This book provides a comprehensive overview and treatment of critical approaches to questions in qualitative research. It also examines questions as tools for strategic thinking and decision making at all stages of the qualitative research process. Written using examples from research and teaching, it situates constructing and formulating questions as a critical aspect of qualitative research that encourages learning to interrogate, and inquire, against the grain. The authors illustrate the ways in which different research questions necessitate different methodological choices, framing questions for research, interviewing, and analysis—suggesting some questions that can guide the writing process. With exercises, sample questions, and outlines for planning research, this book assists qualitative researchers with creating more effective questions, including formulating questions to guide reflexivity meant to confront prevailing assumptions and therefore dismantle and uncover omissions and invisibilities. This book stands out among other qualitative research methods books in its focus on critical approaches to questions as the driver of the research imagination. Utilising a number of examples, there is also a focused discussion of how to arrive at research questions, align interview questions with those research questions, actively construct questions to guide the data analysis process, and use further types of questions to guide the writing process. The examples the authors employ include questions drawn

from qualitative approaches to phenomenology, ethnography, life writing, feminist research, and participatory action research.
