**Technical Rescue Program Development Manual** Sep 27 2022 The formation of a functional and safe technical rescue team, whether single- or multi-discipline, requires careful planning, a large time commitment from the team members, equipment research and acquisition, risk analysis, training, and funding. This manual provides guidance on how to for a technical rescue team.

Freediving - The Guide for the First 10 Meters Mar 29 2020 The book is a complete guide, a manual for the 1st Level of freediving technique. The writer uses his thirty years of experience as an instructor and designer of freediving courses, but most of all, the 15 years during which he has certified more than 1.000 free divers in the 3 levels of diver training, and describes a step by step method for reaching the first 10 meters in freediving. The chapters of the book literally follow the new freediver through the series of steps he must take, from dressing up and entering the water, to his surface swimming and the adaptation of his senses inside the water, as well as all the buoyancy adjustments he will have to make at the surface and before each dive. The book presents the freedive as a nicely structured, logical chain of skills that are explained and presented through a large number of impressive underwater photos of actual diver training. Even the possible mistakes in performing the dive skills are analyzed and explained. The descent to the seabed covers the greater part of the book, and everything is presented in a step by step movement or skill, while the reader quickly finds himself participating in the dive and trying to make the right moves! Every step is explained in detail; for example, the methods of equalizing the ears and the different techniques in order to learn how to equalize and avoid a blocked ear. The ascent phase of the freedive is described in similar detail and presented through many actual training photos. The book covers the use of the buddy system in freediving, presenting the methods used for providing safety and communicating underwater. The methods of planning a freedive are analyzed in detail, both for the diver and for the buddy monitoring the dive. The organization of a day's series of freedives is also presented, as a diver will have to learn how to create a daily plan of his different dives. The dangerous incidents in freediving are considered problems that block or delay the ascent, while rescue techniques and safety measures are also described. Dangerous situations, that every freediver should know how to avoid and how to handle as a rescuer, are covered in detail in the final chapter. As the writer says: "A book cannot of course replace training or an entire dive learning program. Today, however, our era might offer great training programs and excellent instructors, but no remarkable books - comprehensive technique guides. So the mission of this book is to accompany the new freediver into the sea and to help him, step by step, in building an excellent technique and achieving new goals in freediving, like his best trainer and dive buddy!"  
Scuba Diving Hand Signals Jun 24 2022 Proficiency in underwater communication is not only a vital part of scuba diving training, it also makes diving a much more enjoyable and safer experience. Scuba Diving Hand Signals intends to support beginning recreational scuba divers in

learning underwater communication via hand signals. More than 240 commonly used gestures are illustrated and grouped into eight categories: Common signals Problem and emergency signals Training signals Air Pressure and number signals Underwater wildlife signals Environment signals Emotion signals Miscellaneous signals Underwater wildlife signals are accompanied by QR codes that provide access to supplemental online resources.

**Geothermal Heat Flux at the COST B-2 and B-3 Wells, U. S.**

**Atlantic Continental Margin** Apr 29 2020 Heat flow estimates at two sites on the U.S. Atlantic continental margin are presented. An estimate of the heat flowing from the basement also has been obtained. About 4.8 km of sediments penetrated at the COST B-2 and 4.0 km at the COST B-3 were deposited since the Upper Jurassic. Well logs were used to evaluate thermal gradients and sedimentation rates, whereas thermal conductivities and radiogenic heat productions were measured on drill cuttings samples. A procedure to estimate in-situ thermal conductivity from drill cuttings and well logs is described. A substantial set of samples, in the form of drill cuttings, were sorted in four major lithologies: sandstones, siltstones, shales and limestones. Laboratory measurements of density, porosity, thermal conductivity, quartz (%), potassium (%), uranium (ppm) and thorium (ppm) were performed on 128 reorganized and pulverized samples. A significant correlation of the matrix thermal conductivity to quartz and potassium content was found. In situ porosity and volume fraction of each lithology, determined mainly from well logs, were used to calculate in situ mean thermal conductivity. Finally the mean in situ vertical component of the thermal conductivity, as required for heat flow values, has been estimated from a correction factor for the anisotropy of each lithology. The in-situ temperature and anisotropy effects substantially decrease estimates of thermal conductivity at depth. Below the uppermost 1 km in both wells the best estimate of the thermal gradient is 26.3°C km<sup>-1</sup> at COST B-2 and 26.1°C km<sup>-1</sup> at COST B-3, whereas in situ mean thermal conductivities range between about 1.8 and 1.9 W m<sup>-1</sup> K<sup>-1</sup> (4.3-4.5 T.C.U.). The average heat flow is estimated as about 45 mWm<sup>-2</sup> (1.07 H.F.U.) at COST B-2 and 44 mWm<sup>-2</sup> (1.06 H.F.U.) at COST B-3, with an uncertainty of about 20-25%. The mean radiogenic production in sediments at the two sites has been

estimated as 1.83 (COST B-2) and 1.44 (COST B-3)  $10^{-6} \text{Wm}^{-3}$ . With a 12-14 km thick sedimentary sequence a radioactive contribution of 20-25  $\text{mWm}^{-2}$  can be expected. The effects of sediment deposition, compaction, pore water advection and radiogenic heat production have been combined in a numerical model (Hutchison, 1985) to estimate the undisturbed basement heat flux. Although the sedimentation depresses the basement heat flux by 15-20%, this effect is more than compensated by radioactive heat production in the sediments, so that the surface flux is estimated to be higher than that from the basement. The latter is calculated at about 33-39  $\text{mWm}^{-2}$  (0.8-0.9 H.F.U.), a relatively low value. The overall uncertainty is about  $\pm 20\text{-}25\%$ , and other estimates on continental margins with thick sediments (e.g. Reiter and Jessop, 1985) probably have at least a similar uncertainty.

*Criminal Investigation* Sep 15 2021 Criminal Investigation, Third Edition, takes an integrated approach to the investigation process. This introductory text explores how contributors to criminal investigation—and its resulting prosecution—are more effective when they understand and appreciate their role on the team, what role other team members play, and how it all comes together. Readers will learn how investigations are connected to a team that is much larger than those charged with the investigations of a crime. The end result is a solid foundation in criminal investigation.

*Bibliography on Diving and Diving Safety for a Scientific Diving Program*

Feb 26 2020 Diving, scientific diving, and diver safety are specialized subject areas not generally well-represented in even the largest of academic libraries, largely because of difficulties in locating appropriate items to include in the collection. However, in order to adequately fulfill his/her responsibilities, the Diving Safety Officer of a scientific diving program needs easy access to a broad range of books, reports, and journals covering all aspects of diving. This bibliography outlines a comprehensive collection appropriate to the needs of a scientific diving program in a research or academic institution. Items are grouped in broad subject areas corresponding to various aspects of the diving program. Both title and author indexes are also included.
