The Seven Husbands of Evelyn Hugo Nov 12 2020 From Taylor Jenkins Reid, "a genius when it comes to stories about life and love" (Redbook), comes an unforgettable and sweeping novel about one classic film actress's relentless rise to the top—the risks she took, the loves she lost, and the long-held secrets the public could never

imagine. Aging and reclusive Hollywood movie icon Evelyn Hugo is finally ready to tell the truth about her glamorous and scandalous life. But when she chooses unknown magazine reporter Monique Grant for the job, no one in the journalism community is more astounded than Monique herself. Why her? Why now? Monique is not exactly on top of the world. Her husband, David, has left her, and her career has stagnated. Regardless of why Evelyn has chosen her to write her biography, Monique is determined to use this opportunity to jumpstart her career. Summoned to Evelyn's Upper East Side apartment, Monique listens as Evelyn unfurls her story: from making her way to Los Angeles in the 1950s to her decision to leave show business in the late 80s, and, of course, the seven husbands along the way. As Evelyn's life unfolds—revealing a ruthless ambition, an unexpected friendship, and a great forbidden love—Monique begins to feel a very a real connection to the actress. But as Evelyn's story catches up with the present, it becomes clear that her life intersects with Monique's own in tragic and irreversible ways. Written with Reid's signature talent for "creating complex, likable characters" (Real Simple), this is a fascinating journey through the splendor of Old Hollywood into the harsh realities of the present day as two women struggle with what it means—and what it takes—to face the truth.

Congenital Hip Disease in Adults Feb 13 2021 Congenital hip disease (CHD) is the main cause of secondary osteoarthritis (OA) of the hip in young adults, which accounts for almost 40% of all cases of hip OA. Total hip replacement (THR) performed using optimal techniques can achieve a radical improvement in the quality of life of adult patients. This book offers in-depth coverage of all aspects of CHD in adults and its treatment. Relevant information is first provided on the basic anatomy of the hip and OA of the hip and on the classification, epidemiology, and natural history of CHD. The now limited role of femoral and pelvic osteotomies is carefully evaluated, and the use of THR is then considered in detail. Indications and preoperative planning are discussed, and the available operative techniques, analyzed. Clear guidance is provided on overcoming major technical difficulties, and the benefits of particular approaches and techniques are highlighted. More than 180 images and numerous case studies complement this reader-friendly text. The book will be an invaluable tool for orthopedic surgeons, rheumatologists and radiologists.

Total Hip Replacement May 19 2021 Postel, Kerboul, Evrard, Courpied, and their coauthors take a completely objective attitude in describing the progress achieved in total hip replacement with reference to their own experience over the last 20 years. They avoid any triumphant fanfares, but not because of Pascal's dictum: "Do you want people to speak well of you? Don't do it yourself. " Rather, they know that other surgeons, like themselves, are more concerned with efficiency than with laurels, and want that is, new ideas based on sufficiently wide experience and analyzed in a strict and uncompromising manner. In addition, surgeons are particularly anxious for in-depth study of the problems, complications, and failures encountered as well as for indications as to how these can be avoided and corrected. This book is sure to satisfy surgeons on both these counts. It is the exciting and almost incredible product of the work and the immense progress that have taken place in the 15 years since I retired. The spirit behind this work has inspired it from the start. It is characterized by a determination to take constant study of the results as the only guide in matters of indications and technique, and the authors insisted on a system of documentation whose purpose (and perhaps merit) was to facilitate comparison both

of the preoperative functional state and of the final result; they have also kept an open mind for interesting new insights from whatever quarter they might arise.

Hip Arthroscopy and Hip Joint Preservation Surgery Feb 02 2020 The field of hip preservation surgery has evolved over the past decade as our understanding of hip pathomechanics and pathomorphology has expanded. The published literature on non-arthritic hip pathology, for example, has grown exponentially. The topics of controversy in the past decade have been answered in some cases, but new questions have also arisen. In addition to the 99 chapters in the original edition – most of which will be retained and updated as applicable – there will be over 30 brand new chapters focusing on new and more sophisticated techniques from authors that have been the pioneers of the field. The text is divided into nine thematic sections, covering the breadth of the topic and the current state of the art: basic science of the hip; operative basics for hip arthroscopy and open hip preservation surgery; pediatric hip conditions; approaches to disorders of the hip and pelvis; enthesopathy and neuromuscular disorders; hip fractures and instability; avascular necrosis; hip cartilage restoration; and oncologic conditions. Throughout, there is a heavy emphasis on surgical techniques, and video clips will be included in selected chapters. Written and edited by thought leaders and seasoned practitioners in the field, this new edition of Hip Arthroscopy and Hip Joint Preservation Surgery will remain the gold standard for orthopedic surgeons and sports medicine specialists, expanding on the range of techniques available to clinicians treating injuries to and disorders of the hip.

Fragility Fracture Nursing Jul 21 2021 This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the

population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to nursing practice in fragility fracture care.

Interdisciplinary Nutritional Management and Care for Older Adults Apr 05 2020 This open access book aims to primarily support nurses as leaders and champions of multimodal, Interdisciplinary nutrition care for older adults. A structured approach to fundamentals of nutrition care across Interdisciplinary settings is combined with additional short chapters about special topics in geriatric nutrition. The book is designed to provide highly accessible information on evidence-based management and care for older adults, with a focus on practical guidance and advice across acute, rehabilitation, and primary and secondary malnutrition prevention settings. The cost of malnutrition in England alone has been estimated to be 119.6 billion per year, or more than 15% of the total public expenditure on health and social

care. ^65 years). The importance and benefit of specialised nutrition care, delivered by experts in field, is well established for those with complex nutrition care needs. However, despite the substantial adverse impact of malnutrition on patient and healthcare outcomes, specialised management of this condition is often under-resourced, overlooked and under-prioritised by both older adults and their treating teams. As an alternative, timely, efficient, and effective supportive nutrition care opportunities may be appropriately implemented by nurses and non-specialist Interdisciplinary healthcare team members, working together with nutrition specialists and the older adults they care for. Practical, low-risk opportunities should be considered across nutrition screening, assessment, intervention, and monitoring domains for many patients with, or at risk of malnutrition. Whilst a variety of team members may contribute to supportive nutrition care, the nursing profession provide a clear focal point. Nurses across diverse settings provide the backbone for Interdisciplinary teamwork and essential patient care. The nursing profession should consequently be considered best placed to administer Interdisciplinary, multimodal nutrition care, wherever specialist nutrition care referrals are unlikely to add value or are simply not available. As such, the book is a valuable resource for all healthcare providers dedicated to working with older patients to improve nutrition care.

Families Caring for an Aging America Feb 25 2022 Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the

effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

Making Eye Health a Population Health Imperative Dec 26 2021 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and

various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. *Making Eye Health a Population Health Imperative: Vision for Tomorrow* proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

Hippocrasy Jan 15 2021 Two world-leading doctors reveal the true state of modern medicine and how doctors are letting their patients down. In *Hippocrasy*, rheumatologist and epidemiologist Rachelle Buchbinder and orthopaedic surgeon Ian Harris argue that the benefits of medical treatments are often wildly overstated and the harms understated. That overtreatment and overdiagnosis are rife. And the medical system is not fit for purpose: designed to deliver health care not health. This powerful exposé reveals the tests, drugs and treatments that provide little or no benefit for patients and the inherent problem of a medical system based on treating rather than preventing illness. The book also provides tips to empower patients –

do I really need this treatment? What are the risks? Are there simpler, safer options? What happens if I do nothing? Plus solutions to help restructure how medicine is delivered to help doctors live up to their Hippocratic Oath. 'One of the hardest things for a doctor to do ... is nothing. This superb book explains how in medicine and surgery less is often not just more, it's closer to the oath we're all supposed to practise by.' – Norman Swan, award-winning producer and broadcaster of the Health Report and Coronacast 'This eye-opening and enthralling book on the medical and moral hazards which beset the health profession is a must-read for patients and practitioners alike. From 'tooth-fairy science' to medical disasters to the inflated business world of medicine, Hippocrisy is a profoundly thought-provoking and compelling work that challenges our perception of the practice of modern medicine.' – Kate McClymont AM, award-winning investigative journalist for the Sydney Morning Herald/The Age 'Doctors are educated to do good. Yet, as the commercial imperatives of the medical industrial complex tighten their grip, doctors are becoming more and more worried that they are inflicting harm rather than creating benefit. This book is for them and, perhaps even more importantly, for their patients. The road to hell is paved with good intentions: read Hippocrisy and turn back.' – Iona Heath CBE, former President, The Royal College of General Practitioners 'This brilliant book offers clear and compelling evidence that we're all at risk from too much medicine. Using the best of science, these two respected doctors blow the whistle on harmful healthcare. Buchbinder and Harris reveal how overdiagnosis, overtreatment and the medicalisation of normal life are major threats to human health. But this brilliant book also brings hope that we can wind back the harm and waste of unnecessary tests and treatments, and focus more on the great benefits medicine has to offer.' – Ray Moynihan, author of Too Much Medicine? and Selling Sickness, Assistant Professor, Bond University 'About half of us in advantaged countries are now patients or 'providers', or both, and a third of clinical interventions are futile at best. Seeking health is daunting and we could benefit from a guide. Rachele Buchbinder and Ian Harris have provided such with this volume.' – Nordin M Hadler, author of The Last Well Person, The Citizen Patient and Worried Sick, Emeritus Professor of Medicine and Microbiology/Immunology, University of North Carolina 'Throughout medical history, doctors have routinely ignored the fundamental Hippocratic injunction: 'First, do no harm'. Most of their treatments produced lots of harms, with little or no benefit. This wonderful book punctures the hyped claims of modern medicine, showing that it is not nearly as scientific, safe, effective, and honest as it should be. Reading Hippocrisy is essential for doctors (to help make them become more cautious); but even more essential for patients (to help them become more self-protective).' – Allen Frances, author of Saving

Normal, Professor and Chairman Emeritus of the Department of Psychiatry and Behavioral Sciences, Duke University School of Medicine 'A timely book from two leading doctors. They present evidence that despite medicine's lip-service to evidence-based medicine, many unnecessary, wasteful and harmful investigations and treatments abound. Increasingly, the healthy are re-defined as having 'predisease' and drawn into questionable investigations and monitoring programmes. The book's core message is that medicine's hubris and a creeping scientism has come to overshadow the doctor's commitment to care for and comfort their patients and, above all, do no harm. It is time to step back from the brink and revisit the founding principles and core values of our profession.' – Trish Greenhalgh OBE, Professor of Primary Care Research, University of Oxford

The Direct Anterior Approach to Hip Reconstruction Jan 27 2022 "Drs. Sonny Bal, Lee Rubin, and Kristaps J. Keggi have joined their unique perspectives, along with those of a renowned group of experts in the expanding world of anterior hip reconstructions surgery to create this reference. Dr. Keggi was among the first to recognize and leverage the benefits of the direct anterior approach in hip reconstruction; his 40-plus years of experience as a clinician serve as the foundation for the text. The Direct Anterior Approach to Hip Reconstruction provides a stepwise progression for surgeons to learn how to perform total hip arthroplasty using the direct anterior approach, with detailed chapters and video instruction from an internationally renowned group of expert authors. The chapters are structured to focus on the art of using the direct anterior approach to address a variety of hip pathology, such as femoroacetabular impingement, pediatric operations, revision implant surgery, and others. The unique applications of the direct anterior approach within the fields of pediatrics, trauma, reconstruction, and tumor surgery are highlighted, along with chapters focused on femoroacetabular impingement, hip preservation surgery, and postoperative rehabilitation protocols designed to improve patient outcomes. The final section of the book reviews the evidence-based outcomes related to direct anterior total hip arthroplasty, addresses the evolving implant design concepts specific to this approach, and outlines directions for educating the next generation of residents and fellows who will continue to develop and refine these techniques.
