Selected Papers from the 2018 IEEE International Workshop on Metrology for the Sea Apr 16 2021 This Special Issue is devoted to recent developments in instrumentation and measurement techniques applied to the marine field. ¶The sea is the medium that has allowed people to travel from one continent to another using vessels, even today despite the use of aircraft. It has also been acting as a great reservoir and source of food for all living beings. However, for many generations, it served as a landfill for depositing conventional and nuclear wastes, especially in its deep seabeds, and we are assisting in a race to exploit minerals and resources, different from foods, encompassed in it. Its health is a great challenge for the survival of all humanity since it is one of the most important environmental components targeted by global warming. ¶ As everyone may know, measuring is a step that generates substantial knowledge about a phenomenon or an asset, which is the basis for proposing correct solutions and making proper decisions. However, measurements in the sea environment pose unique difficulties and opportunities, which is made clear from the research results presented in this Special Issue.

Insights from Practices in Community-Based Research Sep 29 2019 Free Access in January 2019 There has been an increasing interest in the emerging subfield within linguistics and anthropology often referred to as community-based research (Himmelman 1998, Rice 2010, Crippen and Robinson 2013, among others). This volume brings together perspectives from academics, community members, and those that find themselves in both academia and the community. The volume begins with a working definition of the notions of community-based research as a practice and illustrates how such notions shifted, without abandoning the outlined tenets within the working

definition, as the chapters developed to include notions of community-based research as a tool and ideology as well as an orientation. Each of the 17 chapters represents a case-study with the first five including discussions of broader issues and theoretical perspectives while exploring community-based research as an emerging subfield within linguistics. The case-studies comprise work from the Americas, Australia, India, Europe, and Africa. The goal of the volume is to build on the emerging literature and practices in the field to arrive at a better understanding of how community-based research is theorized and practiced in a variety of environments, communities, and cultures.
