[Peripheral Production in X Pile](#) Oct 30 2019 It is proposed to fill the empty channels surrounding the active core of the X pile with thorium carbonate. Three rings of the carbonate would be put around the pile. The inner ring would be not less than 30 cm. from the nearest uranium. The thorium would serve two purposes: the escaping neutrons would produce U233 in it and it would protect the concrete by decreasing the neutron flux. The estimated yield of U233 is .012 gm/1000 kw day and the thorium would absorb about 50% of the escaping neutrons.

[Angina Pectoris with Normal Coronary Arteries: Syndrome X](#) Mar 28 2022 Angina pectoris with normal coronary arteriograms is a common entity which has puzzled cardiologists almost since the advent of

coronary arteriography. Despite major advances in the understanding of the pathophysiology of angina in recent years and a multitude of studies on the subject, the cause and mechanisms underlying the syndrome of angina with normal coronary arteries remain unknown. Indeed, results of investigations are controversial and speculation still prevails regarding the nature of the so called `Syndrome X'. Almost every important aspect of Syndrome X has been tackled in the book and the reader is exposed not only to the cardiologists' opinion, but also to the authoritative views of the gastroenterologists, gynaecologists and psychiatrists, extremely well represented in this monograph. The book deals with `cardiologists' Syndrome X' and not the metabolic entity termed `Syndrome X'. The possible connection between the two, however, is discussed. Angina with Normal Coronary Arteries: Syndrome X contributes to the understanding of Syndrome X and helps clinicians manage their Syndrome X-patients better and investigators to open new avenues for research.

[Lewin's GENES X](#) Feb 01 2020 The fields of molecular biology and molecular genetics is rapidly changing with new data acquired daily and new insights into well-studied processes presented on a scale of weeks or months rather than years. For decades Lewin's GENES has provided the teaching community with the most cutting edge

presentation of molecular biology and molecular genetics, covering gene structure, sequencing, organization, and expression. The latest edition, with a knowledgeable new author team, has enlisted 21 scientists to provide revisions and content updates in their individual fields of expertise, ensuring that Lewin's GENES X is the most current and comprehensive text in the field. Informative new chapters, as well as a reorganization of material, provide a more logical flow of topics and many chapters have been renamed to better indicate their contents. Lewin's GENES X also contains new pedagogical features to help students learn as they read and an online student study guide allows students to test themselves on key material.

Studying Atomic Dynamics with Coherent X-rays Sep 29 2019

Diffusion in solids at moderate temperatures is a well-known phenomenon. However, direct experimental evidence about the responsible atomic-scale mechanisms has been scarce, due to

difficulties in probing the relevant length- and time-scales. The present thesis deals with the application of X-ray Photon Correlation Spectroscopy (XPCS) for answering such questions. This is an established method for the study of slow dynamics on length-scales of a few nanometres. The scattered intensity in the diffuse regime, i.e. corresponding to atomic distances, is very low, however, and so it has so far been considered impossible to use XPCS for this problem. Threefold progress is reported in this work: It proposes a number of systems selected for high diffuse intensity, it optimizes the photon detection and data evaluation procedures, and it establishes theoretical models for interpreting the results. Together these advances allowed the first successful atomic-scale XPCS experiment, which elucidated the role of preferred configurations for atomic jumps in a copper-gold alloy. The growth in available coherent X-ray intensity together with next-generation X-ray sources will open up a wide field of application for this new method.
