EBOOK: Paramedics: From Street to Emergency Department Case Book Apr 26 2020  
"A great book written by a truly medical family ... This book will prove invaluable to the student paramedic and a great aid to the practicing

paramedic ... The case studies are thought provoking and give an opportunity for students to learn about situations they will encounter during their careers and experienced paramedics and practitioners the opportunity to reflect on similar cases and question their

practice ... I would highly recommend this book." Paul Bates (Paramedic), Higher Education Programme Manager, London Ambulance Service NHS Trust, UK "Individuals new to pre-hospital care will find this text well structured and clear. The informative

introduction and subsequent case studies are written in an easy to read question and answer style. These provide a starting point for the reader to undertake further focused reading and investigation. A helpful text for students who are new to caring for patients, in the pre-hospital environment." Amanda Blaber, Senior Lecturer, University of Brighton, UK "This book presents a series of medical vignettes of varying complexity. It discusses the differential diagnosis and clinical care, offering important background knowledge to assist the Paramedic in following the best clinical pathway. Fellows and Fellows provide the vital link between the classroom and reality, removing the mysticism from the complex and ever changing world of pre-hospital care" Dr David Zideman, Clinical Lead - Emergency Medical Care, London Organising Committee of the Olympic and Paralympic Games "This is a great introductory text ... The language is easy to read and does not use over complicated medical jargon, which can be off putting for novice students (and experienced ambulance personnel alike!) whilst introducing the reader to 'ambulance language'. The comprehensive glossary is an unexpected find and a fabulous revision tool, explaining many difficult medical concepts and conditions." Emma Redwood, State Registered Paramedic, University of Northampton, UK "Until now there have been very few books that outline the importance of all stages of the care received by a patient. This book fills that gap without overwhelming those new to the

paramedic profession. In addition it works well as a supplementary book for anyone working in the pre-hospital field to remind them the importance of seeking a differential diagnosis and not jumping to any conclusions ... A good book for paramedic students to read and enjoy." Ruth Lambert, Student Paramedic, University of Northampton, UK This accessible book is designed to help both practising and student paramedics prepare to deal with 25 of the most commonly seen pre-hospital care scenarios, as well as to revise for practical exams. Part of a new Case Book series, the book starts with a description of the patient history and examination, then challenges you to spot important signs, determine a likely diagnosis and make important management decisions. This technique helps to cement prior knowledge and teach both scientific and practical knowledge, both vital for today's paramedic. By looking at the journey of the patient and paramedic, the authors provide a more complete understanding of the care pathway, helping you to be aware of signs of severe illness and develop safe practice. In addition, the book: Encourages you to develop knowledge of pathophysiology, pharmacology and out of hospital emergency treatment plans to point of handover at definitive care Covers a wide range of scenarios, from everyday situations to more complex Contains practical cases, checklists, clinical tools, key information boxes and clear answers to clinical questions The book is written by a unique father and

daughter author team, with the complementary perspectives of a paramedic educator and a student.

#### **Crisis Standards of Care** Oct 25 2022

Catastrophic disasters occurring in 2011 in the United States and worldwide—from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand—have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations—both naturally occurring and man-made—under conditions of scarce resources.

Building on the work of phase one (which is described in IOM's 2009 letter report, Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement—state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. Crisis Standards of Care provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. Crisis Standards of Care is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.

### **Pre-hospital Obstetric Emergency Training**

Jan 16 2022 The Pre-hospital Obstetric Emergency Training (POET) programme provides an introduction to the obstetric patient and the anatomical and physiological changes that occur during pregnancy (including interpretation of patient-held records and rapid assessment of the obstetric patient). It includes clear definitions and describes risk factors, diagnosis and pre-hospital management of significant problems that occur in both early and late pregnancy and the immediate postnatal period. These are all situations that the pre-hospital practitioner may attend. This text and the accompanying integrated on-line and 'hands on' course will help practitioners identify and manage a range of time-critical obstetric emergencies specifically in the pre-hospital setting, and provides a structured examination and assessment technique as an aid to determining what treatment should be provided before transport, as well as when and how urgently transport should be initiated. POET is of relevance to paramedics, ambulance staff, doctors, and nurses working in the emergency pre-hospital setting and to midwives facilitating home births. It will also be of considerable value to medical and nursing practitioners working in Emergency Departments and unscheduled care settings where immediate access to skilled obstetric assistance is not available.

### **The Challenging of Airway Management in Pre-hospital Emergency**

Jun 28 2020 Background and Goal of Study: Pre-hospital (PH) emergency in our country is performed by a medical team (MT) (nurse and doctor), activated according emergency algorithms. Tracheal intubation (TI), considered the gold standard in airway management (AM), is sometimes required. TI is frequently performed under poor conditions (space, patient positioning, available materials, nobody to call for help). Skilled and trained professionals in AM are crucial to success. Often these professionals are anesthetists. The

aim of our study was to determine which causes need TI in PH critical patients. Materials and methods: Prospective audit (june to november 2015) performed in a pre emergency department of a tertiary hospital. Statistical analysis with Microsoft Excel. Results and discussion: 43 patients were subjected to TI. 65% males, 52% >65 y-old. The main causes of MT activation were cardiopulmonary arrest (CPR) (37.2%) and alteration of level of consciousness (32.6%). Other causes were trauma including cranio encephalic injury (CEI) (11.6%), airway compromise (9.3%), dyspnea (4.7%), syncope (2.3%) and refractory epilepsy (2.3%). On MT arrival, some of these situations had worsened: CPR increased its prevalence to 55.8%, depressed level of consciousness with glasgow coma scale (GCS)

**Pre-Hospital Anesthesia Handbook** Jun 09 2021 This second edition handbook details new and improved procedures, current drugs and updated algorithms used by the crews of the Great North Air Ambulance who have been providing this life saving intervention since 2004. It will be of interest to pre-hospital care doctors and trainees, especially those studying for the GNAAS course. Pre-Hospital Anaesthesia is one of the most demanding interventions that can be made in the field. The exact incidence of failed intubation is difficult to quantify, but it is clear that it is higher than in hospital. Equally it is certain that anyone undertaking it should have clear instruction in the technique and a thorough understanding of

all it entails.

**Prehospital Care Pearls and Pitfalls** May 08 2021 Prehospital Care Pearls and Pitfalls, is a unique, stimulating, and easy-to-read way, provide practical information applicable to the prehospital setting and help the prehospital emergency care provider be prepared to manage the myriad of emergency and non-emergency situations that he or she will be called upon to assist.

*Prehospital Emergency Care* Nov 02 2020 Resource added for the Emergency Medical Technician program 305313.

*Evolution of Pre-Hospital Emergency Care* Mar 26 2020 This volume covers the early development of mobile coronary care within the context of major societal and scientific changes, leading to pre-hospital emergency intensive care, cardiopulmonary resuscitation (CPR) and defibrillation. The success of the Belfast Cardiac Ambulance stimulated the development of broader pre-hospital emergency services and the concomitant growth of related expertise and paramedical personnel. This book celebrates the origins and early development of out-of-hospital resuscitative care. There is much to celebrate: Resuscitation, particularly from ventricular fibrillation, is commonplace. The science of resuscitation is well defined. Effective training programmes for basic and advanced skills are in place. Public training in CPR and use of automated external defibrillators (AEDs) are widespread.

**Disease Control Priorities, Third Edition**

**(Volume 1)** Jun 21 2022 Essential Surgery is part of a nine volume series for Disease Control Priorities which focuses on health interventions intended to reduce morbidity and mortality. The Essential Surgery volume focuses on four key aspects including global financial responsibility, emergency procedures, essential services organization and cost analysis.

Pre-hospital Obstetric Emergency Training Dec 03 2020 The Pre-hospital Obstetric Emergency Training (POET) programme provides an introduction to the obstetric patient and the anatomical and physiological changes that occur during pregnancy (including interpretation of patient-held records and rapid assessment of the obstetric patient). It includes clear definitions and describes risk factors, diagnosis and pre-hospital management of significant problems that occur in both early and late pregnancy and the immediate postnatal period. These are all situations that the pre-hospital practitioner may attend. This text and the accompanying integrated on-line and 'hands on' course will help practitioners identify and manage a range

of time-critical obstetric emergencies specifically in the pre-hospital setting, and provides a structured examination and assessment technique as an aid to determining what treatments should be provided before transport, as well as when and how urgently transport should be initiated. POET is of relevance to paramedics, ambulance staff, doctors, and nurses working in the emergency pre-hospital setting and to midwives facilitating

home births. It will also be of considerable value to medical and nursing practitioners working in Emergency Departments and unscheduled care settings where immediate access to skilled obstetric assistance is not available.
