International Negotiation in a Complex World Sep 04 2020 The process of negotiation, standing as it does between war and peace in many parts of the globe, has never been a more vital process to understand than in today's rapidly changing international system. Students of negotiation must first understand key IR concepts as they try to incorporate the dynamics of the many anomalous actors that regularly interact with conventional state agents in the diplomatic arena. This hands-on text provides an essential introduction to this high-stakes realm, exploring the impact of complex multilateralism on traditional negotiation concepts such as bargaining, issue salience, and strategic choice. Using an easy-to-understand board game analogy as a framework for studying negotiation episodes, the authors include a rich array of real-world cases and examples—now updated with the results of the Paris climate change agreement—to illustrate key themes, including the intensity of crisis situations for negotiators, the role of culture in communication, and the impact of domestic-level politics on international negotiations. Providing tools for analyzing why negotiations succeed or fail, this innovative text also presents effective exercises and learning approaches that enable students to understand the complexities of negotiation by engaging in the diplomatic process themselves.

Autism Feb 09 2021 Based on Francesca Happé's best-selling textbook, *Autism: An Introduction to Psychological Theory*, this completely new edition provides a concise overview of contemporary psychological theories about autism. Fletcher-Watson and Happé explore the relationship between theories of autism at psychological (cognitive), biological and behavioural levels, and consider their clinical and educational impact. The authors summarise what is known about the biology and behavioural features of autism, and provide concise but comprehensive accounts of all influential psychological models including 'Theory of Mind' (ToM) models, early social development models and alternative information

processing models such as 'weak central coherence' theory. The book also discusses more recent attempts to understand autism, including the 'Double Empathy Problem' and Bayesian theories. In each case, the authors describe the theory, review the evidence and provide critical analysis of its value and impact. Recognising the multiplicity of theoretical views, and rapidly changing nature of autism research, each chapter considers current debates and major questions that remain for the future. Importantly, the book includes the voices of autistic people, including parents and practitioners, who were asked to provide commentaries on each chapter, helping to contextualise theory and research evidence with accounts of real-life experience. The book embraces neurodiversity whilst recognising the real needs of autistic people and their families. Thus *Autism: A New Introduction to Psychological Theory and Current Debate* provides the reader with a critical overview of psychological theory but also embeds this within community perspectives, making it a relevant and progressive contribution to understanding autism, and essential reading for students and practitioners across educational, clinical and social settings.
