Guidelines and Metrics for Assessing Space System Cost Estimates Apr 04 2020 This handbook, designed to help analysts assess cost estimates of space systems, covers planning an estimate and identifying the key data needed. It also provides typical cost ranges for components of relevant historical space programs. It supplements the Air Force Cost Analysis Agency's spacecraft training course by focusing on the cost analysis implications of the systems and processes covered in the course.

Working environment and productivity Oct 30 2019 Globalisation and demographic trends underline the twin challenge of the Nordics with productivity stagnation and a decreasing work force. Increasing productivity and the work force will be an answer to both. A good work environment can do both: If less people have to take sick leave as result of bad work environments, this will contribute to increasing the work force. Also, for some time, a relationship between work environment and productivity has been hypothesised. Happy, healthy workers, in short, are more productive than not-so-happy and not-so-healthy workers are. This report is based on the most comprehensive empirical study of the cohesion between working environment and productivity. It confirms the hope of many, i.e. that improvements in working environment and improved productivity are highly correlated. The results are robust across time and the investigated countries.

Aquaculture zoning, site selection and area management under the ecosystem approach to aquaculture Feb 01 2020

The ecosystem approach to aquaculture provides the conceptual guideline for spatial planning and management. This publication describes the major steps related to these activities. The rationale for and objectives of each step, the ways (methodologies) to implement it, and the means (tools) that are available to enable a methodology are described in a stepwise fashion. Recommendations to practitioners and policy-makers are provided. A separate policy brief accompanies this paper. The benefits from spatial planning and management are numerous and include higher productivity and returns for investors, and more effective mitigation of environmental, economic and social risks, the details of which are provided in this paper.

Maritime Informatics Apr 16 2021 Shipping is the world's oldest sharing economy and is conducted in a self-organizing manner. Shipping is capital, energy, and information intensive, and with the growing impact of digitalization and climate change, there is a need to rethink the management and operations of this critical global industry - assisted in no small way by maritime informatics. Building upon the recently published inaugural book *Maritime Informatics* by Springer, this book will address some of the most recent practical developments and experiences, particularly from a global perspective. The focus of the book is to address contemporary movements to tackle global concerns and to complement *Maritime Informatics*.
