Complete History of U.S. Combat Aircraft Sep 27 2022 Since the first days of rivalry between the Wright Brothers and Glenn Curtiss, aircraft manufacturers have been vying for lucrative military aircraft contracts and competing for prized long-term production runs. As a result, many advanced and now legendary aircraft have been designed, built, and flown in every generation of aviation development. Focusing on the Cold War era, this book shows readers how crucial fly-off competitions have been to the development of America's military air arsenal. This book not only explains in detail how fly-off competitions are conducted, it shows the reader what both competing aircraft designs looked like during their trials, and then what the losing aircraft would have looked like in operational markings had it actually won. Described in vivid detail are the specific aircraft and how they fared, as well as the inside political maneuvering and subterfuge involved in often-controversial aircraft contract awards. Beginning with the Boeing B-47 Stratojet's decisive victory over rival Convair and Martin designs and ending with today's advanced unmanned aerial marvels, this book covers every era of Post-World War II aviation. Author Erik Simonsen uses the wonders of modern digital photography to create highly believable images of aviation's most tantalizing 'might have beens.'

F-105 Thunderchief MiG Killers of the Vietnam War Apr 22 2022 Despite its 'F-for-fighter' designation, the F-105 was designed and purchased to give the USAF an aircraft capable of the delivery of nuclear weapons at very high speed, long range and below-the-radar altitudes. However, when the Vietnam War began it also emerged as USAF's best available tactical bomber for a 'limited conventional' war as well. Extensively targeted by MiG-17s and MiG-21s the F-105 pilots developed innovative tactics that allowed them to compete in air-to-air duels with their smaller, more manoeuvrable enemies. Illustrated throughout with extensive photographs detailing weapon loads, internal features and action shots of actual engagements, this volume examines the conduct of the Rolling Thunder strike missions and the tactics used for attack and defence by the attack, escort fighter and radar monitoring elements within strike formations. *F-105 Thunderchiefs* Dec 26 2019 One of the U.S. Air Force's most important fighter bombers, the F-105 Thunderchief was in operation for almost thirty years. It played a key role in the Vietnam War. This book details the histories of the 103 F-105s that are displayed around the world. Part One of the work summarizes the 29 years of F-105 operations, focusing on events, aircraft configurations, units and bases.

The individual histories and photographs of each surviving F-105 from its production to its static display are contained in Part Two. Appendices provide a mapped-out, state by state "Thunderchief Tour," and the fate, by serial number, of all 117 of the F-105s that survived their operational career only to end up in scrap yards.

USAF F-105 Thunderchief vs VPAF MiG-17 Aug 14 2021 The F-105D Thunderchief was originally designed as a low-altitude nuclear strike aircraft, but the outbreak of the Vietnam War led to it being used instead as the USAF's primary conventional striker against the exceptionally well-defended targets in North Vietnam and Laos. F-105 crews conducted long-distance missions from bases in Thailand, refuelling in flight several times and carrying heavy external bombloads. The MiG-17 was the lightweight, highly manoeuvrable defending fighter it encountered most often in 1965-68 during Operation Rolling Thunder. A development of the MiG-15, which shocked UN forces during the Korean War, its emphasis was on simplicity and ease of maintenance in potentially primitive conditions. Fully illustrated with stunning artwork, this book shows how these two aircraft, totally different in design and purpose, fought in a series of duels that cost both sides dearly.

Republic F-105 Thunderchief Mar 09 2021 The F-105 Thunderchief was primarily designed for tactical nuclear operations. For this reason, it was on nuclear [Victor] alert in Europe (Bitburg and Spangdahlem Air Bases in Germany) and the Far East (Kadena on Okinawa and Osan in the Republic of Korea). After President John F. Kennedy took office in January 1961, his Secretary of Defense, Robert McNamara, shifted the USAF's focus more and more to conventional warfare including, through modifications, the mission of the F-105. When the air war against North Vietnam was initiated in earnest on March 2, 1965, the USAF needed an aircraft with a load-carrying ability, and the only aircraft that could do that job was the Thunderchief. This book not only gives in-depth accounts of various historical F-105 events, with inputs from the pilots involved, but is also lavishly illustrated with over 150 images, many of which have never been published before.

Republic F-105 Thunderchief Aug 26 2022 The Republic F-105 Thunderchief was the fastest and most successful strike fighter of the Cold War. Designed to deliver nuclear weapons at low altitude and then fight its way back to base, by the early 1960s it was the primary weapon in the USAF's tactical strike arsenal. Thunderchief pilots in Europe, the Far East and the USA stood on short-notice alert, ready to take on the formidable defenses of their Communist Bloc targets. The F-105 was, however, to become a legend in a very different conflict. As direct American involvement in Vietnam increased, F-105s were deployed -

initially as a deterrent, but ever more as conventional attack fighters against insurgency in Laos and Vietnam. With the start of the bombing campaign against North Vietnam, the Thunderchief became a vital element in attacks against some of the most heavily defended territory in modern history.

The God of War Dec 06 2020 It's meant to be the triumphant debut of the Ares, a US superjet named after the Greek God of war. With its ultra powerful laser and ability to easily outmaneuver anything else in the sky, the Ares opens a new era in warfare. But when it is stolen before of a crowd of international dignitaries, the President and his defense staff must use outdated technology to try to stop their creation from sparking a war between civilizations. It's up to Colonel "Jesse" James to save the world from impending doom. But the obstacles will be numerous. He faces suspicion from the President's chief advisor, a romantic interest with unknown allegiances, and a terror plot that seems too obvious to be true. In his fourth novel, Stewart is in top form- fusing a high octane plot with hair raising flight scenes drawn from his career as a fighter pilot. "The plane's the real star, of course, and the book soars when it's in its natural habitat, the sky." - Publishers Weekly

RF-101 Voodoo Units in Combat Aug 02 2020 McDonnell's F-101 Voodoo series was in many ways the most interesting of the 'Century Series' fighter programmes of the 1950s, partly because the type's design and intended mission changed radically during a 40-year career. Originally designed as a fighter-bomber, it was converted to be a reconnaissance aircraft, serving alongside the U-2 and RF-8 Crusaders during the Cuban Missile Crisis and the Vietnam War. Although it gained a reputation as a difficult aircraft to handle, the jet's supersonic speed and newly-developed camera suite enabled it to conduct vital low-altitude photo-reconnaissance missions over heavily-defended target areas. In combat, the RF 101 was usually 'first in-last out' for strike missions. This made it a ready target, with a solo aircraft flying straight and level to gather target photo evidence at low-altitude offering enemy gunners plenty of opportunity to shoot the Voodoo down. This study tells the combat stories of this extraordinary aircraft, highlighting the difficulty of the missions on which it was sent and the courage of its pilots.

An Eagle Tells Flying Stories with Associated Drivel Jan 27 2020 This book is about a shy boy, who learned discipline from strict parents and seven years of Parochial School. My ten years in a band taught marching. A graduate mechanical engineer, who loved to fly control line model airplanes, was commissioned a 2nd Lieutenant, and found the Air Force a piece of cake. The Air Force taught me to fly, although I had little desire to do so, and pushed me to be an extremely aggressive pilot. Skill, knowledge,

and training allowed me to advance through the highest performance jet aircraft during the time period of 1955 through 1984. Jet aircraft flown were the T-33A, F86F (Sabre), F100 (Series A, D & F Super-Sabre), F105 (B & D Thunderchief), and the F110 (F4D Phantom). My stories progress from Primary Flight School, through all training and missions in the above aircraft as Pilot, Test Pilot, Instructor, and Air to Air Fighter Pilot. Few understand the training and life of an Air Force Pilot, so the "Drive!" shows a portion of life with these interesting, actual flying stories. A most enjoyable read!
