Setting Up Community Health and Development Programmes in Low and Middle Income Settings Apr 08 2020 A majority of people living in rural areas and urban slums worldwide have minimal access to healthcare. Without information about what to give a child with stomach flu, how to relieve the pain of a broken bone, and how to work against increased substance abuse in a village, the whole community suffers. Children, adolescents, adults, and older people are all affected by the lack of what many of us view as basic healthcare, such as vaccination, pain killers, and contraceptives. To improve living conditions and life expectancy, the people in urban slums and rural areas need access to a trained health care worker, and a functioning clinic. Setting up Community Health and Development Programmes in Low and Middle Income Settings illustrates how to start, develop, and maintain a health care programme in poor areas across the world. The focus is on the community, and how people can work together to improve health through sanitation, storage of food, fresh water, and more. Currently, there is a lack of 17 million trained health care workers worldwide. Bridging the gap between medical professionals and people in low income areas, the aim of this book is for a member of the community to receive training and become the health care worker in their village. They will then in turn spread information and set up groups working to improve health. The book also explains in detail how communities can work alongside experts to ensure that practices and processes work effectively to bring the greatest impact. Copiously illustrated and written in easy-to-read English, this practical guide is designed to be extremely user friendly. Ideal for academics, students, programme managers, and health care practitioners in low and middle income settings worldwide, it is

an evidence based source full of examples from the field. Setting up Community Health and Development Programmes in Low and Middle Income Settings shows how a community can both identify and solve its own problems, and in that way own its future. Health Education Sep 13 2020 It could be said with some justification that the task of education is to safeguard people's right to learn about important aspects of human culture and experience. Since health and illness occupy a prominent place in our everyday experience, it might reasonably be argued that everyone is entitled to share whatever insights we possess into the state of being healthy and to benefit from what might be done to prevent and treat disease and discomfort. Health education's role in such an endeavour would be to create the necessary understanding. No other justification would be needed. In recent years, however, questions have been posed with increasing insistence and urgency about efficiency - both about education in general and health education in particular. We can be certain that such enquiries about effectiveness do not reflect a greater concern to know whether or not the population is better educated: they stem from more utilitarian motives. It is apparent, even to the casual observer, that economic growth and productivity have become a central preoccupation in contemporary Britain.
