Terrorists' Target Selection Feb 08 2021 The author examines the factors which influence terrorists' target selection. In particular he looks at the influence of the ideologies, strategies and tactics of terrorist groups, and describes how these are restricted by the terrorists' resources, by protective and anti-terrorist measures, by the society within which the terrorists operate, and by the nature of the terrorists and their supporters. He concludes that terrorists' target selection is often both explicable and logical.

**Ground Vehicle Dynamics** Jan 27 2020 Ground Vehicle Dynamics is devoted to the mathematical modelling and dynamical analysis of ground vehicle systems composed of the vehicle body, the guidance and suspension devices and the corresponding guideway. Automobiles on uneven roads and railways on flexible tracks are prominent representatives of ground vehicle systems. All these different kinds of systems are treated in a common way by means of analytical dynamics and control theory. In addition to a detailed modelling of vehicles as multibody systems, the contact theory for rolling wheels and the modelling of guideways by finite element systems as well as stochastic processes are presented. As a particular result of this integrated approach the state equations of the global systems are obtained including the complete interactions between the subsystems considered as independent modules. The fundamentals of vehicle dynamics for longitudinal, lateral and vertical motions and vibrations of automobiles and railways are discussed in detail.

**A Theory of Local Entrepreneurship in the Knowledge Economy** Mar 09 2021 The principal audience for this book seems to be deliberately and most certainly an academic one; that said, those practitioners from a business management or central/local government support-agency background might also find the text a useful resource. Intrinsically, those employed teaching and researching within the fields of entrepreneurship or regional economic development will find this publication an invaluable and indispensable reference tool. . . After an excellent, cohesive and informative introductory chapter, which places the book firmly in the field of regional entrepreneurship theory development, the reader is effortlessly prepared for the intellectually challenging read ahead. . . this book is well laid out and it is easy for the reader to pick up the thread of the argument, even after a lay-off. The endnotes after each chapter are useful and comprehensive, adding richness to the text through the additional information. The bibliography is as comprehensive as it is exhaustive. . . Professor Julien has given us a book that presents both an interesting and alternative perspective to the field of entrepreneurial cross-disciplinary research. Paul J. Ferri, *International Journal of Entrepreneurial Behaviour and Research* . . . it is my view that this book gives a very important contribution for the understanding of development of local entrepreneurship, through its cross-disciplinary approach. I see the book is especially interesting from an entrepreneurship and a regional development perspective. . . this book should inspire research that takes a more holistic approach using different levels of analysis and applies it to economic development at a local/territorial level, when studying entrepreneurship. Einar Lier Madsen, *International Small Business Journal* The reader who is interested in entrepreneurship and/or regional development will find this book a welcome contribution to the field. Rainer Harms, *Entrepreneurship and Innovation* For too long, researchers have regarded local dynamism as the result of the actions of certain entrepreneurs. If this were the case, how could we explain the simultaneous presence of winning , stagnating or declining areas with very similar socioeconomic profiles within the same region? Departing from this restrictive and somewhat inadequate approach, Pierre-André Julien considers entrepreneurship as a collective behaviour specifically related to the dynamism of the milieu in which it develops. The author introduces a complex, innovative theory of local entrepreneurship, demonstrating that the emergence of new ventures and the development of existing enterprises cannot be understood without taking into account certain factors: locale, social capital, networking and entrepreneurial culture within a given area are all crucial to entrepreneurial growth. Expanding upon this theory, the book demonstrates how entrepreneurship can be fostered in order to support collective development. Various forms of partnership among socioeconomic actors are then analysed to highlight the social conventions and entrepreneurial culture that connect and intensify the energies at the root of local dynamism. This highly original book represents a departure from entrepreneurship literature that is largely limited to the study of entrepreneurs behaviour. Its dynamic presentation of holistic theory will prove an extremely absorbing read for those with an

academic or professional interest in business and management, entrepreneurship and regional development.

**Lemon-Aid New Cars and Trucks 2011** Oct 28 2022 As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."
