Business Process Management Nov 09 2020 Business Process Management (BPM) has been in existence for decades. It uses, complements, integrates and extends theories, methods and tools from other scientific disciplines like: strategic management, information technology, managerial accounting, operations management etc. During this period the main focus themes of researchers and professionals in BPM were: business process modeling, business process analysis, activity based costing, business process simulation, performance measurement, workflow management, the link between information technology and BPM for process automation etc. More recently the focus moved to subjects like Knowledge Management, Enterprise Resource Planning (ERP) Systems, Service Oriented Architectures (SOAs), Process Intelligence (PI) and even Social Networks. In this collection of papers we present a review of the work and the outcomes achieved in the classic BPM fields as well as a deeper insight on recent advances in BPM. We present a review of business process modeling and analysis and we elaborate on issues like business process quality and process performance measurement as well as their link to all other organizational aspects like human resources management, strategy, information technology (being SOA, PI or ERP), other managerial systems, job descriptions etc. We also present recent advances to BPR tools with special focus on information technology, workflow, business process modeling and human resources management tools. Other chapters elaborate on the aspect of business process and organizational costing and their relationship to business process analysis, organizational change and reorganization. In the final chapters we present some new approaches that use fuzzy cognitive maps and a recently developed software tool for scenario creation and simulation in strategic management, business process management, performance measurement and social networking. The audience of this book is quite wide. The first chapters can be read by professionals, academics and students who want to get some basic insight into the BPM field whereas the remaining present more elaborate and state of the art concepts methodologies and tools for an audience of a more advanced level.

Strategic Value Management Dec 11 2020 Innovative strategic management solutions for today's market Strategic Value Management addresses common problems among business managers and other professionals involved in thinking about developing and managing organizations. In it, author Juan Pablo Stegmann integrates all strategic management and business strategy into an innovative standard that introduces key metrics to strategic management and stock value creation. He argues that most complex business issues can be reduced to the three dimensions of stock value creation--profits, sales growth, and capital--that are linked to three critical strategic management decisions--competition, innovation, and resources. His new approach indicates that every strategy has a clear dollar metric, which can measure its consequences of the strategies in terms of stock value. Competitive and growth strategies are analyzed along with economic, financial, dynamic, and contingent approaches Includes a companion CD-ROM, which contains Stegmann's proven model for strategic management and stock value creation Ethical consequences of strategic decisions are introduced--showing how ethics are linked to long-term stock value creation Explains the roots of the current financial crisis by examining the link between the financial world and strategic management, and proposes possible solutions For any looking to enhance their understanding of this discipline, Strategic Value Management offers a new conceptual model for thinking about business strategy and its link to stock value creation.
