[Delinquency Research](#) Sep 11 2020 This remarkable guide to delinquency studies was co-winner of the 1968 C. Wright Mills Award for the best book in the field of social problems. The work is in effect three books in one: a forthright account of how to analyze survey data, a penetrating critique of delinquency research, and a set of original essays on methodology. It is a landmark work that continues to serve as an essential tool for those who both study and want to learn about deviance. In the new introduction, Travis Hirschi describes the setting in which 'Delinquency Research' was written, noting that it exudes a confident optimism that well-conducted research and analysis will quickly lead to important advances in the field. Hirschi maintains that twenty-eight years after 'Delinquency Research' was first published the validity of its optimistic view has been confirmed by the fact that the field of criminology is among the leading producers of high quality research. As a result, we know more about crime and delinquency than ever before. 'Delinquency Research' forms the basis for present and future studies of criminology and is a necessary addition to the libraries of sociologists, criminologists, scholars in the area of delinquency, and students interested in research methods.

Mass Appraisal Methods Nov 06 2022 This book takes a cross-disciplinary and cross-cultural look at mass appraisal expertise for property valuation in different market conditions, and offers some cutting-edge approaches. The editors establish an international platform and present the scientific debate as well as practical feasibility considerations. Heretic and orthodox valuation methods are assessed based on specific criteria, partly technical and partly institutional. Methodological evaluation is approached using two types of criteria: operational concerns about how to determine property value differentials between spatial and functional units of real estate in a valid and reliable way (technical criteria); and the kind of market circumstances being operated in (institutional criteria). While technical criteria are relatively well-researched, there is little theoretically informed work on the connection between country context and selection of property appraisal methods. The book starts with an

examination of current mass property appraisal practices, presenting case studies from widely differing markets - from the American and Dutch, where regression-based methods have been used successfully for some time; to the Eastern European and other emerging economies, where limitations have to be compensated by focusing on the modelling assumptions. The second part of the book looks at sophisticated modelling approaches, some of which represent combinations of elements from two or more techniques. Whatever the exact modelling approach, the requirements are always high for the quality of the data and suitability of the method. In the final section, methods are evaluated and compared according to technical criteria and against institutional contexts. With its exceptionally wide coverage of valuation issues, *Mass Appraisal Methods*: an international perspective for property valuers addresses property valuation problems common to different countries and approaches applicable in both developed and emerging economies.

Pay for Performance Jun 01 2022 "Pay for performance" has become a buzzword for the 1990s, as U.S. organizations seek ways to boost employee productivity. The new emphasis on performance appraisal and merit pay calls for a thorough examination of their effectiveness. *Pay for Performance* is the best resource to date on the issues of whether these concepts work and how they can be applied most effectively in the workplace. This important book looks at performance appraisal and pay practices in the private sector and describes whether—and how—private industry experience is relevant to federal pay reform. It focuses on the needs of the federal government, exploring how the federal pay system evolved; available evidence on federal employee attitudes toward their work, their pay, and their reputation with the public; and the complicating and pervasive factor of politics.

Participatory Rural Appraisal Jan 16 2021 Participatory Rural Appraisal (PRA) methods, now known as Participatory Learning and Action (PLA), have been extensively used in development research,

action and evaluation. This book is based on the author's decade-long intensive field experience—each method is explained by drawing on field-based illustrations. The book vividly describes the methods of PRA, highlighting the essential features as well as the application, merits and limitations of each method. Participatory Rural Appraisal: Principles, Methods and Application outlines the application of PRA methodology in areas like participatory poverty assessment, sustainable livelihood analysis, assessment of hunger, vulnerability analysis, organizational analysis, monitoring and evaluation. Separate sections on SWOT analysis and on the method of interview and dialogue are also included in the book. Besides, the author has provided guidelines for sector-wise application of PRA, which would serve as a ready reference for students and practitioners alike. A chapter on the roles of members of a PRA team is another key feature of this book, which would be immensely valuable for students, researchers and academicians working in the areas of social work, rural development, agriculture, and environmental science, and also for NGO workers and trainers and researchers in the development field.
