The Handbook of Innovation and Services Jun 20 2019 'This book represents a significant step towards dealing with the lacuna constituted by the inadequacy of the literature on the services. And, as such, it approaches its task from a variety of directions.' From the foreword by William J. Baumol, New York University, US 'The Handbook of Innovation and Services is an exceptional volume. Its contributors, including Faïz Gallouj, William Baumol, Jean Gadrey, and Pascal Petit, are among the major thinkers in both the fields of

the economics of services and the economics of innovation. Selected topics include the "cost disease", services innovation in the global economy, social innovation in the services, and innovation and employment in services. The book, I am sure, will become a standard reference volume in both these fields in the ensuing years.' Edward Wolff, New York University, US This Handbook brings together 49 international specialists to address an issue of increasing importance for the world's post-industrial economies; innovation as it relates to services. Contemporary economies have two fundamental characteristics. Firstly, they are service economies in as much as services account for more than 70 per cent of the wealth and jobs in most developed countries. Secondly, they are innovation economies as recent decades have seen an unprecedented development of scientific, technological, organisational and social innovations. This Handbook expertly links these two major characteristics in order to investigate the role of innovation in services, an issue that until now has been inadequately explored and one that poses many theoretical and operational challenges. This comprehensive volume encompasses the views of eminent scholars from a range of disciplines including economics, management, sociology and geography, and draws on a number of different analytical and methodological perspectives. With its multi-disciplinary approach this Handbook will be an invaluable reference source for academics and students in the fields of economics, management and the geography of services and innovation. Public authorities and managers in the service sector will also find this book fascinating.

Lemon-Aid New Cars and Trucks 2013 Jan 20 2022 Canada's automotive "Dr. Phil" says there's never been a better time to buy a new car or truck. For deals on wheels, 2013 will be a "perfect storm." There's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar, a worldwide recession driving prices downward, and a more competitive Japanese auto industry that's still reeling from a series of natural disasters. In addition to lower prices and more choices, 2013 car buyers will see more generous cash rebates, low financing rates, bargain leases, and free auto maintenance programs. Buy, sell, or hold? Which cars and trucks are "wallet-friendly" and can easily last 15 years? Which vehicles offer the most features to best accommodate senior drivers? Do ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers? Is GM's 2013 Volt electric car destined to become an electric Edsel? These questions and more are answered in this informative guide.

Semantic Web Services Apr 30 2020 Over the last decade, a great amount of effort and resources have been invested in the development of Semantic Web Service (SWS) frameworks. Numerous description languages, frameworks, tools, and matchmaking and composition algorithms have been proposed. Nevertheless, when faced with a real-world problem, it is still very hard to decide which of these different approaches to use. In this book, the editors present an overall overview and comparison of the main current evaluation initiatives for SWS. The presentation is divided into four parts, each referring to one of the evaluation initiatives. Part I covers the long-established first two tracks of the Semantic Service Selection (S3) Contest – the OWL-S matchmaker evaluation and the SAWSDL matchmaker evaluation. Part II introduces the new S3 Jena Geography Dataset (JGD) cross evaluation contest. Part III presents the Semantic Web Service Challenge. Lastly, Part IV reports on the semantic aspects of the Web Service Challenge.

The introduction to each part provides an overview of the evaluation initiative and overall results for its latest evaluation workshops. The following chapters in each part, written by the participants, detail their approaches, solutions and lessons learned. This book is aimed at two different types of readers. Researchers on SWS technology receive an overview of existing approaches in SWS with a particular focus on evaluation approaches; potential users of SWS technologies receive a comprehensive summary of the respective strengths and weaknesses of current systems and thus guidance on factors that play a role in evaluation.

RESTful Web Services Mar 10 2021 "Every developer working with the Web needs to read this book." -- David Heinemeier Hansson, creator of the Rails framework "RESTful Web Services finally provides a practical roadmap for constructing services that embrace the Web, instead of trying to route around it." -- Adam Trachtenberg, PHP author and EBay Web Services Evangelist You've built web sites that can be used by humans. But can you also build web sites that are usable by machines? That's where the future lies, and that's what RESTful Web Services shows you how to do. The World Wide Web is the most popular distributed application in history, and Web services and mashups have turned it into a powerful distributed computing platform. But today's web service

technologies have lost sight of the simplicity that made the Web successful. They don't work like the Web, and they're missing out on its advantages. This book puts the "Web" back into web services. It shows how you can connect to the programmable web with the technologies you already use every day. The key is REST, the architectural style that drives the Web. This book: Emphasizes the power of basic Web technologies -- the HTTP application protocol, the URI naming standard, and the XML markup language Introduces the Resource-Oriented Architecture (ROA), a common-sense set of rules for designing RESTful web services Shows how a RESTful design is simpler, more versatile, and more scalable than a design based on Remote Procedure Calls (RPC) Includes real-world examples of RESTful web services, like Amazon's Simple Storage Service and the Atom Publishing Protocol Discusses web service clients for popular programming languages Shows how to implement RESTful services in three popular frameworks -- Ruby on Rails, Restlet (for Java), and Django (for Python) Focuses on practical issues: how to design and implement RESTful web services and clients This is the first book that applies the REST design philosophy to real web services. It sets down the best practices you need to make your design a success, and the techniques you need to turn your design into working code. You can harness the power of the Web for programmable applications: you just have to work with the Web instead of against it. This book shows you how.
