**Getting Started in Radio Astronomy** Oct 03 2019 Radio astronomy is a mystery to the majority of amateur astronomers, yet it is the best subject to turn to when desirous of an expanded knowledge of the sky. This guide intends to instruct complete newcomers to radio astronomy, and provides help for the first steps on the road towards the study of this fascinating subject. In addition to a history of the science behind the pursuit, directions are included for four easy-to-build projects, based around long-term NASA and Stanford Solar Center projects. The first three projects constitute self-contained units available as kits, so there is no need to hunt around for parts. The fourth – more advanced – project encourages readers to do their own research and track down items. Getting Started in Radio Astronomy provides an overall introduction to listening in on the radio spectrum. With details of equipment that really works, a list of suppliers, lists of online help forums, and written by someone who has actually built and operated the tools described, this book contains everything the newcomer to radio astronomy needs to get going.

**Lockheed T-33 Thunderbird / Shooting Star Pilot's Flight Operating Manual** Nov 15 2020 The T-33 ðThunderbirdð was the training variant of the U.S. Air Force's first production jet fighter, the F/P-80 ðShooting Starð. Originally designed by ðKellyð Johnson during WWII, the P-80 went from drawing board to airborne in a record 150 days! One of the most successful aircraft in history, the T-33 has flown in the air forces of over 30 nations. Over 6500 were produced between 1949-59. Originally printed by Lockheed and the U.S.A.F., this Flight Operating Handbook taught pilots everything they needed to know before entering the cockpit. Classified ðRestrictedð, the manual was declassified and is here reprinted in book

form. This affordable facsimile has been slightly reformatted. Care has been taken however to preserve the integrity of the text.

**Diagnosis & Prognosis of AAR Affected Structures** Aug 01 2019 This book presents the work of the RILEM Technical Committee 259-ISR. Addressing two complementary but fundamental issues: the kinetics of the reaction, and how this will affect the integrity of the structure (serviceability and strength), it also provides methodology for assessing past deterioration to enable readers to make engineering/science-

based predictions concerning future expansion. The book is divided into six major topics: selection and interpretation of optimal monitoring system for structures undergoing expansion to monitor the progress of the swelling evolution and its consequences; development/refinement of current laboratory procedures to determine the kinetics of the reaction i.e. expansion vs (future) time, and to determine the kinetic characteristics of the time-dependent reaction to be used in a finite element simulation; extrapolation of results from structural component laboratory testing; selection of material properties based on data from existing structures affected by the alkali silica reaction or delayed ettringite formation; identification of critical features that should be present in a finite element code, development of test problems for validation, and a survey of relevant programs able to conduct a transient structural analysis of a structure undergoing chemically induced expansion; and lastly guidelines for finite element codes. The book is intended for practitioners responsible for concrete structures affected by the damaging alkali aggregate reaction, engineers dealing with aging structures, and researchers in the field.
