Outpatient Regenerative Medicine Apr 29 2022 This book is unique in focusing expressly on regenerative medicine in the aesthetic field. With the aid of more than 400 color pictures, it provides step-by-step descriptions of procedures that can be performed easily in the private practice. The number of people pursuing anti-aging and cosmetic procedures in order to achieve a youthful, healthy, or simply improved aspect is continually increasing. At the same time the available techniques and materials have undergone rapid innovation in terms of both safety and quality. The practitioner no longer looks just at the correction or camouflage of an unwanted feature but rather also aims to address the aging process itself. Regenerative medicine appears to provide a unique and unlimited opportunity in this context. Autologous fat grafting, adipose-derived stem cells, and autologous platelet-rich plasma represent just some of the attractive options that can be used for volume restoration and facial rejuvenation.

Leading an Academic Medical Practice Dec 26 2021 This book informs and supports medical educators and clinic leaders regarding the key clinical and administrative components necessary to run an academic medical practice. From a group of expert faculty from the Society of General Internal Medicine (SGIM) with years of experience in managing academic medical practices, this manual offers comprehensive guidance to the clinic director regarding critical factors involved with running an academic medical practice including, but not limited to: compliance with Accreditation Council for Graduate Medical Education (ACGME) requirements, clinic orientation and curricula implementation, clinic workflow challenges, billing, coding, and the Primary Care Exception Rule, productivity metrics and quality indicators, evaluation and feedback for trainees, faculty, and clinic staff, implementation of a Patient Centered Medical Home (PCMH), development of controlled substance prescribing policies, medical student involvement in resident clinics, and Veteran Affairs practices and non-traditional care settings. The scope of this book is sufficiently broad to be comprehensive and practical while still anticipating the further evolution of the academic medical practice in the years to come. Each chapter focuses on a particular aspect of clinic leadership and will offer real-world examples and management "pearls" for the clinic director. Chapters highlight common challenges and solutions and should be useful across disparate practice settings. This is an ideal resource for clinic directors, core faculty, and clinic leadership in academic outpatient medical practices, particularly those within the field of Internal Medicine, Primary Care, and related specialties.

Transforming Health Care Scheduling and Access Dec 14 2020 According to *Transforming Health Care Scheduling and Access*, long waits for treatment are a function of the disjointed manner in which most health systems have evolved to accommodate the needs and the desires of doctors and administrators, rather than those of patients. The result is a health care system that deploys its most valuable resource--highly trained personnel--inefficiently, leading to an unnecessary imbalance between the demand for appointments and the supply of open appointments. This study makes the case that by using the techniques of systems engineering, new approaches to management, and increased patient and family involvement, the current health care system can move forward to one with greater focus on the preferences of patients to provide convenient, efficient, and excellent health care without the need for costly investment. *Transforming Health Care Scheduling and Access* identifies best practices for making significant improvements in access and system-level change. This report makes recommendations for principles and practices to improve access by promoting efficient scheduling. This study will be a valuable resource for practitioners to progress toward a more patient-focused "How can we help you today?" culture.

A Medical History of Hong Kong Nov 24 2021 This book focuses on a seldom discussed topic despite its immeasurable impact on the health of the citizens and public health in Hong Kong—the development of outpatient medical services and their contributions. In the early 20th century, Chinese elite organized and operated a number of Chinese Public Dispensaries in Hong Kong and Kowloon, initially to reduce the prevalence of “dump bodies” on the streets during epidemics of smallpox or plague, and to determine the cause of death of these bodies. Later other services including domiciliary deliveries by trained midwives were added. The government founded similar clinics in the New Territories. After WWII, the government took over all the Chinese Public Dispensaries and operated them as general outpatient clinics. Over the years, more general clinics and special clinics were developed. These clinics helped improve the health indices of the population to those of the Western countries by the 1970s. Endorsement Modern-day medicine increasingly emphasises patient management on an outpatient basis. We are indebted to Professor Moira M. W. Chan-Yeung for her tireless efforts in researching the history of medical outpatient services in Hong Kong. Through this book, readers will gain insights into how outpatient medicine in the past has shaped the city’s modern day healthcare system, and have a glimpse into its future development. —Professor Lau Chak-sing, Head of Department of Medicine, LKS Faculty of Medicine, The University of Hong Kong An exemplary piece of scholarship that interprets the past and illuminates our future paths. Seldom has history, so dear and near, been told with such prides and hopes, for maestros and ordinary folks. —Professor Gilberto K. K. Leung, Clinical Professor and Associate Dean (Teaching & Learning), LKS Faculty of Medicine, The University of Hong Kong
