Mazda MX-5 Miata Jul 10 2020 Celebrating a quarter century of the car that redefined its genre. [apply edits made above]
The Mazda MX-5, (known as Miata in North America and Eunos Roadster in Japan), revolutionized the lightweight two-seater roadster market. By taking the front-engine, rear-wheel-drive layout of traditional British and Italian roadsters and combining it with the modern function and reliability for which Japanese cars were justly famous, Mazda created what many consider the perfect sports car. The MX-5 became the best-selling sports car of all time, selling over a million units worldwide. Customers proved that they hadn't lost their desire for simple, lightweight two-seat convertibles; they had simply lost their desire for unreliable, archaic European anachronisms that caught on fire as part of their charm. In 2009, English automotive critic Jeremy Clarkson wrote: "The fact is that if you want a sports car, the MX-5 is perfect. Nothing on the road will give you better value. Nothing will give you so much fun. The only reason I'm giving it five stars is because I can't give it 14." Mazda MX-5 Miata: Twenty-Five Years is a handsomely-illustrated coffee-table book celebrating Mazda's ground-breaking MX-5 Miata, the car that revolutionized the lightweight two-seater roadster market.

The open Secret of Toyota's Change Aug 30 2019 Inhaltsangabe: Abstract: This Master thesis explores the organisational change, as performed by Toyota after World War II which, within decades, made this company the most successful automobile producer in the world and a model of corporate governance. Since the Toyota Production System (TPS) was born and continuously developed, it gave such a boost of productivity to the Japanese automobile industry that soon it was copied all over the world. The details of this system, which is to a huge amount based on practical experience and which requires a huge amount of preparatory work, are sufficiently known within the industry. Nevertheless, other Japanese companies and,

in particular, international companies fail to catch up with Toyota. The question is, why? Quite a number of car manufacturers already produce according to lean principles, as the TPS instruments are sometimes called, quite successfully, as it seems, and nevertheless they lag behind the performance of Toyota. A highly saturated North American and European automobile market requires thorough change, since companies, due to an increasing global competition, need to undergo some kind of change to survive in the market. Experts assume further consolidation among Original Equipment Manufacturers (OEM) until 2010. Although everything seems to be known about TPS, there is obviously a remainder, because otherwise there would be more Toyotas than just one. There must be something in TPS that has not been identified or has been left out so far by the majority of OEMs all over the world. (Judging from the current competition in the automotive industry, it is more likely that this something has been unintentionally ignored). This is the case although the whole system, without any restrictions, is made accessible to competitors and anyone interested in TPS. Obviously, the knowledge of this mostly missing aspect or link in TPS is restricted, because in the current situation in the automotive industry no company can afford giving away any chances. This master thesis aims at identifying and preparing the above mentioned, apparently hidden or unintentionally ignored, aspects of the Toyota Production System (TPS) which make Toyota more successful than other car makers. Problem definition: Although everything seems to be known about TPS, there is obviously a remainder, because otherwise there would be more Toyotas than just one. There must be something in TPS that has not been identified or has [...]

Foreign Direct Investment and Urban Growth in China Aug 11 2020 This book puts forward an institutional explanation of the recent dynamics of foreign direct investment (FDI) in China. It argues that the concentration of FDI in the Chinese manufacturing economy since the beginning of this century is largely the result of China's entrepreneurial urban growth strategy, which was in turn motivated by the overall political and fiscal structures of China and was facilitated by urban land use under the manipulation of municipalities. By identifying the interactions between cross-border capital flow, national regulations and local responses, this book not only provides a fresh understanding of China's FDI pattern from an urban perspective that has been rare among publications on similar topics, but also sheds light on the drivers underlying China's rapid economic growth and its implications for sustainable development. It also stands as a useful reference for other countries and regions that plan to launch their own state-led development projects.

China Shifts Gears Dec 03 2019 Chinese production of automobiles rose from 42,000 cars per year in 1990 to 2.3 million in 2004; the number of passenger vehicles on the road doubled every two and a half years through the 1990s and continues to grow. In *China Shifts Gears*, Kelly Sims Gallagher identifies an unprecedented opportunity for China to "shift gears" and avoid the usual problems associated with the automobile industry—including urban air pollution caused by tailpipe emissions, greenhouse gas emissions, and high dependence on oil imports—while spurring economic development. This transformation will only take place if the Chinese government plays a leadership role in building domestic technological capacity and pushing foreign automakers to transfer cleaner and more energy-efficient technologies to China. If every new car sold in China had the cleanest and most energy-efficient of the automotive technologies already available, urban air pollution could be minimized, emissions of climate-altering greenhouse gases would be lower than projected, and the Chinese auto industry would continue to flourish and contribute to China's steady economic development. But so far, Gallagher finds, the opportunity to shift gears has been missed. Gallagher looks in detail at three U.S.-Chinese joint ventures: Beijing Jeep, Shanghai GM, and Chang'An Ford. These case studies are based on original research, including interviews with 90 government officials, industry representatives, and experts in both countries. Drawing from the case studies, Gallagher explores the larger issues of the environmental and economic effects of technology transfer in the automobile industry and the policy implications of "leapfrogging" to more advanced technology.

The Difference Aug 23 2021 In this landmark book, Scott Page redefines the way we understand ourselves in relation to one another. The Difference is about how we think in groups--and how our collective wisdom exceeds the sum of its parts. Why can teams of people find better solutions than brilliant individuals working alone? And why are the best group decisions and predictions those that draw upon the very qualities that make each of us unique? The answers lie in diversity--not what we look like outside, but what we look like within, our distinct tools and abilities. The Difference reveals that progress and innovation may depend less on lone thinkers with enormous IQs than on diverse people working together and capitalizing on their individuality. Page shows how groups that display a range of perspectives outperform groups of like-minded experts. Diversity yields superior outcomes, and Page proves it using his own cutting-edge research. Moving beyond the politics that cloud standard debates about diversity, he explains why difference beats out homogeneity, whether you're talking about citizens in a democracy or scientists in the laboratory. He examines practical ways to apply diversity's logic to a host of

problems, and along the way offers fascinating and surprising examples, from the redesign of the Chicago "EI" to the truth about where we store our ketchup. Page changes the way we understand diversity--how to harness its untapped potential, how to understand and avoid its traps, and how we can leverage our differences for the benefit of all.
