The Story of Modern Preventive Medicine (Routledge Revivals) Dec 05 2020 First published in 1929, this book is a continuation of Arthur Newsholme's *Evolution of Preventive Medicine*, published in 1927, which was concerned with the possibilities in progress of prevention of disease, up to the middle of the nineteenth century. The current volume focuses on the modern period and looks at the work of Louis Pasteur in particular. It provides a complete overview of the subject of preventive medicine at the time, and should be used as the basis for more detailed study. The book will be useful to those in medical circles, as well as historians interested in medicine.

Antioxidants in Therapy and Preventive Medicine Jan 26 2020 Twenty years ago, the enzyme superoxide dismutase which uses the superoxide radical anion as its specific substrate was reported. With this discovery was born a new scientific field, in which oxygen, necessary for aerobic life on this planet, had to be considered also in terms of its toxicity and stresses. This stimulated the search for knowledge of active oxygen species in biology and medicine. Superoxide and other reactive oxygen species are now implicated in many disease processes. Major advances have been achieved during these past years with respect to free radical generation and mechanisms of free radical action in

causing tissue injury. In parallel, the possibility of influencing free radical related disease processes by antioxidant treatment was studied in various in vitro and in vivo systems. This was the unique theme of a conference organized in Paris by the Society for Free Radical Research (December 9-10, 1988) which brought together experts from basic sciences and clinicians in order to evaluate the current status of antioxidant therapy. The conference emphasized fundamental processes in antioxidant action. Among the major topics were superoxide dismutase (SOD) and low molecular weight substances with such activity, called SOD mimics. Other antioxidant enzymes were also considered. Antioxidant vitamins, in particular vitamins E and C, other naturally occurring antioxidants and various synthetic antioxidants were included in the presentations as there is now a rapidly developing series of compounds with potentially interesting clinical applications.

Ethical Issues in Preventive Medicine Dec 25 2019 The first suggestions and exchange of ideas for this Workshop began about two years ago when, at the invitation of Professor E Bennett, Director of Health and Safety of the Commission of the European Communities and Professor W W Holland of the Panel of Social Medicine and Epidemiology of the EEC, I asked the Panel to sponsor a project for the study of Ethical Issues in Preventive Medicine. The Panel gave its approval and support and asked Dr L Karhausen, Dr R Blaney, and me to undertake the planning. Since then we have had several meetings in Brussels and have added Professor Heleen Terborgh-Dupuis and Mrs Susie Stewart to our small planning team. The Planning Committee

invited many experts to collaborate with us on the project and, as can be seen from the list of participants, they represent many scientific disciplines and many countries. About a year ago we also asked for the help and sponsorship of the NATO Science Council which was generously given. The culmination of our efforts was the Workshop held in Athens in January 1985, the proceedings of which are contained in the present book. The members of the Planning Committee and the participants at the Workshop would like to express thanks to Mr H Durand, Secretary General for NATO Scientific Affairs and Dr M di Lullo, Programme Director of N A TO Scientific Affairs and to Professor Bennett and Professor Holland for all the moral and financial support they have given to this project.

Rose's Strategy of Preventive Medicine Dec 29 2022 The Strategy of Preventive Medicine by Geoffrey Rose, first published in 1993, remains a key text for anyone involved in preventive medicine. Rose's insights into the inextricable relationship between ill health, or deviance, in

individuals and populations they come from, have transformed our whole approach to strategies for improving health. His personal and unique book, based on many years research, sets out the case that the essential determinants of the health of society are to be found in its mass characteristics. The deviant minority can only be understood when seen in its societal context, and effective prevention requires changes which involve the population as a whole. He explores the options for prevention, considering them from various viewpoints - theoretical and scientific, sociological and political, practical and ethical. The applications of his ideas are illustrated by a variety of examples ranging from heart disease to alcoholism to road accidents. His pioneering work focused on a population wide approach to the prevention of common medical and behavioral disorders has become the classic text on the subject. This reissue brings the original text to a new generation involved in preventive medicine. Kay-Tee Khaw and Michael Marmot retain the original text intact, but have added their own perspective on the work. They examine what relevance Rose's ideas might have in the era of the human genome project and other major scientific advances, they consider examples of how the theory might be applied and generalised in medicine and beyond, and discuss what implications it holds for the future. There is also an explanation of the population perspective, clarifying the often confused thinking and arguments about determinants of individual cases and determinants of population incidence. Rose's Strategy of Preventive Medicine will ensure that this seminal work continues to be read by future generations.

Preventive Medicine between Obligation and Aspiration Jan 06 2021

Preventive Medicine between Obligation and Aspiration is a study of ethical questions regarding mass screening, vaccination, and health policy programmes. These interventions aim to enhance public health but may also constrain personal autonomy and cause harm, and influence our moral views. So far, these issues have hardly been subject to systematic ethical analysis. This study aims to fill this gap by providing an overview of moral problems in preventive medicine and by explicating norms for good practice. Throughout the book it is argued that some moral concerns about prevention - namely concerns about medicalization - cannot be adequately grasped in terms of strict and binding moral norms. Various moral concepts and types of norms 'beyond obligation' are explored and developed in order to give practical meaning to these rather vague concerns. In this way the book contributes to applied ethics as well as to ethical theory. It is of interest to professionals in public health and preventive medicine and to scholars in applied ethics and moral philosophy.
