Histopathology of Preclinical Toxicity Studies Apr 28 2020 Histopathological assessment of tissue sections is an important component of many preclinical studies which are conducted to support the safety and clinical development of novel therapeutic agents for use in the treatment of human diseases. The drug discovery process, aided by modern biotechnology, is now capable of generating highly potent, pharmacologically active agents which can give rise to quite unusual constellations of tissue pathology. The complexity and the number of histopathological findings in individual studies indicate the need for lucidity in descriptions and conclusions. In the light of these and other difficulties, this text is aimed towards bringing together into one volume a description of histopathological changes which relate to toxicity testing of therapeutic agents in the usual test species: rat, mouse, dog and non-human primate. This book is an excellent starting point for the analysis of drug-induced findings in toxicity studies.

Handbook of Histopathological and Histochemical Techniques Jun 11 2021 Handbook of Histopathological and Histochemical Techniques (Including Museum Techniques), Third Edition is a reference guide on techniques used in histology and histochemistry, including museum techniques. This book is comprised of 36 chapters divided into six sections. After giving a brief description of the structure and contents of the cell, this book then turns to the various methods of examination of tissue cells and structures, including the smear method, vital staining, and electron microscopy. The next two sections deal with fixation, decalcification, processing, and section cutting, along with stains, impregnations, and mountants. An exhaustive survey of carbohydrate and protein histochemistry is included. Special procedures such as autoradiography, micro-incineration, and injection techniques are described. The remaining chapters focus on the preparation, mounting, and presentation of museum specimens. The book concludes with an analysis of the microscope. This monograph will be invaluable to all those with an interest in histology and histochemistry, including undergraduate students in the biological and health sciences, pathologists in both the hospital setting and experimental research, and technologists and workers in various research fields.
