Examining the Relationship between

Trauma and Addiction Apr 05 2020 Trauma, trauma-related disorders, substance use, and addictive disorders often co-occur, and frequently play a role in the problems and issues that social workers contend with in their practice with individuals, families, and communities. Research shows that there is a relationship between trauma-related symptoms and problematic use of substances and other addictive behaviors. Individuals who experience these co-occurring problems have better outcomes when their issues are addressed with integrated treatment approaches. Trauma-informed care and trauma-specific treatment are therefore important components of effective social work interventions. This book examines various types of trauma, such as intergenerational trauma, adverse childhood events, childhood sexual abuse, and minority stress, amongst various populations and

settings, including Native Americans, homeless youth, drug court participants, and LGB adolescents. It also explores the challenges in delivering trauma services in outpatient addiction treatment settings. Furthermore, it provides practical information on how to implement trauma-informed approaches in addiction treatment, and offers insights into the experience of a trauma survivor who is also recovering from a substance use disorder. This book was originally published as a special issue of the Journal of Social Work Practice in the Addictions.

The Relationship Between Democracy and

Education Sep 03 2022 This e-book presents an analysis on the correlative relations and interactions between democracy and education at macro and micro levels. This analysis demonstrates that democracy and educational institutes are influenced by the natural, demographic, institutional and cultural dimensions of their society and that the relation

between them should be dealt with under the authentic conditions of the society and with an integral perspective. This e-book provides a sound base for discussions on democracy at all levels. Thus it contributes to functional discussions about the philosophy behind education and democracy, by helping education institutions, teachers, administrators and all responsible citizens to consider their own roles within a comprehensible and simple frame in society through the process of democratization.

The Representation of the Relationship between Center and Periphery in the Contemporary Novel Dec 06 2022 This collection of essays offers a comparative perspective on different

forms of representation of social hybridity in contemporary novels through various cultural and linguistic lenses. It explores the various subcategories of their interdependent relationships, including power and domination between hegemony and marginality. The book revolves around five axes: namely, writing strategies and reterritorialization; marginality and intermediary spaces; revisited urban spaces; when periphery becomes center; and the modality of confrontation and construction of identity. It focuses on the identification and classification of spaces in order to understand their function in relation to the thematic strategy of the novel. Its main objective is identifying the textual representation of the challenge of center and periphery, as well as these concepts' role and significance in diegesis. Thus, new light is shed on the subject and on the contemporary novel as a whole.

Planned Behavior Oct 12 2020 Psychologists regard the relationship between attitudes and behavior as a key to understanding human behavior. Here leading researchers discuss basic and applied issues relating to how human thought translates into action. The contributors focus on the theory of planned behavior, a model of attitude-behavior relations that takes into account not just attitudes, but also the influence of significant others around us, issues of personal agency, and motivation. The book begins with an overview of the theory of planned behavior, from the initial impetus to better understand attitude-behavior relations, through the theory of reasoned action, to the theory of planned behavior. Among the applied issues discussed in subsequent chapters are using the model to predict homeless persons' use of services, understanding the motivation underpinning suicide in an at-risk sample, and experimentally manipulating antecedents of

risky driving behavior. More methodologically oriented chapters explore how the theory of planned behavior may be developed in the future. Several chapters discuss the potential integration of the theory of planned behavior with social identity theory and goal theory; other chapters discuss the key components of the theory of planned behavior and whether the theory might usefully be extended with the concept of descriptive norms. This book considers a full spectrum of important developments that enhance our understanding of the theory of planned behavior and efforts to extend it. From applications to new avenues for research, the chapters that make up this book address important issues surrounding theoretical and practical approaches to addressing problems in attitude-behavior research.

The Relationship Between Medical Malpractice and Quality of Care May 31 2022 Some of the arguments for or against changes in the malpractice system are concerned with the impact of the present and future malpractice system on the quality of medical care provided, and this paper is addressed to that issue. The paper is divided into four parts: (1) consideration of quality-of-care constructs; (2) an overview of those issues of medical malpractice which are pertinent to quality of

care considerations; (3) examination of the relationship, both theoretical and empirical, between malpractice and quality-of-care; and (4) development of policy and research suggestions for understanding and/or altering the current malpractice system.

Government Views on the Relationships Between Population and Environment Jul 09 2020 Concern about the environment has risen to the top of the international agenda & has

brought in its wake a renewed attention to population issues. This publication presents a focus on the perceptions of selected Governments on the impact that population size, growth & spatial distribution have on the physical environment.

Assessing the Relationship Between Propagule Pressure and Invasion Risk in Ballast Water

Mar 05 2020 The human-mediated introduction of species to regions of the world they could never reach by natural means has had great impacts on the environment, the economy, and society. In the ocean, these invasions have long been mediated by the uptake and subsequent release of ballast water in ocean-going vessels. Increasing world trade and a concomitantly growing global shipping fleet composed of larger and faster vessels, combined with a series of prominent ballast-mediated invasions over the past two decades, have prompted active national and international interest in ballast water

management. Assessing the Relationship Between Propagule Pressure and Invasion Risk in Ballast Water informs the regulation of ballast water by helping the Environmental Protection Agency (EPA) and the U.S. Coast Guard (USCG) better understand the relationship between the concentration of living organisms in ballast water discharges and the probability of nonindigenous organisms successfully establishing populations in U.S. waters. The report evaluates the risk-release relationship in the context of differing environmental and ecological conditions, including estuarine and freshwater systems as well as the waters of the three-mile territorial sea. It recommends how various approaches can be used by regulatory agencies to best inform risk management decisions on the allowable concentrations of living organisms in discharged ballast water in order to safeguard against the establishment of new aquatic nonindigenous species, and to protect and preserve existing indigenous

populations of fish, shellfish, and wildlife and other beneficial uses of the nation's waters. *Assessing the Relationship Between Propagule Pressure and Invasion Risk in Ballast Water* provides valuable information that can be used by federal agencies, such as the EPA, policy makers, environmental scientists, and researchers.

EMG Methods for Evaluating Muscle and Nerve Function Aug 10 2020 This first of two volumes on EMG (Electromyography) covers a wide range of subjects, from Principles and Methods, Signal Processing, Diagnostics, Evoked Potentials, to EMG in combination with other technologies and *New Frontiers in Research and Technology*. The authors vary in their approach to their subjects, from reviews of the field, to experimental studies with exciting new findings. The authors review the literature related to the use of surface electromyography (SEMG) parameters for measuring muscle function and fatigue to the limitations of different analysis

and processing techniques. The final section on new frontiers in research and technology describes new applications where electromyography is employed as a means for humans to control electromechanical systems, water surface electromyography, scanning electromyography, EMG measures in orthodontic appliances, and in the ophthalmological field. These original approaches to the use of EMG measurement provide a bridge to the second volume on clinical applications of EMG.

The Relationship Between Carbohydrate Content and the Cooking Qualities of Michigan Potatoes Jun 19 2021

Examining the Relationship Between Economics and Philosophy Jan 07 2023 In today's data-driven world, certain infrastructures of society have begun to lose their anthropological traits. Economics, specifically, has started placing importance on quantity over quality, excluding its philosophical perspective. Scientists and

associates of economics need to be reacquainted with the psychological aspect of commerce and its significance to humanity. Examining the Relationship Between Economics and Philosophy is an essential reference source that discusses the psychological view of economics as well as its philosophical background. Featuring research on topics such as cognitive science, neoliberalism, and neuroeconomics, this book is ideally designed for scientists, economists, managers, executives, academicians, researchers, and students seeking coverage on the philosophy of the financial system and its impact on competitive markets.

Investigating the Relationship between Migration and Terrorism May 07 2020

ABSTRACT The 2015 migration crisis and the sudden rise of terror attacks between 2015 and 2017 resulted in the rise of xenophobic sentiments and in associating refugees and asylum seekers with terrorists. This paper investigates the relationship between migration

and terrorism by treading in the path of the 2015 migration crisis and seeks to prove that refugees are not terrorists. However, the paper also sustains the hypothesis that right-wing political ideologies, right-wing extremism, ill-treatment of asylum seekers, or restrictive policies could contribute to the radicalisation of refugees in the long term. The paper gives an overview of the 2015 migration crisis and re-examines the most important milestones, such as the Arab Spring, which is considered to be one of the main triggers of the migration influx in Europe. The relationship between migration and terrorism will be analysed along the lines of state terrorism and non-state terrorism, which phenomena's significance increased after the Arab Spring. While the main aim is to discredit the xenophobic and Islamophobic sentiments, the research reveals that the declaration of the Caliphate - and the resulting migration crisis - indeed contributed to the rise of terror attacks, although not in the form of refugee terrorism.

Furthermore, the research also shows that one of the key reasons behind the rising number of terror attacks in Europe is the inadequate Muslim integration that created the breeding ground for homegrown terrorists. Henceforth, the investigation supports the theory that the rise in radicalisation is the key factor behind the growing number of terror attacks; thus, its prevention is the greatest security challenge Europe is facing nowadays, since xenophobic attitude, ill-treatment in refugee camps, and right-wing extremism could lead to the radicalisation of newly arriving refugees.

The Relationship Between John the Baptist

and Jesus of Nazareth Jan 15 2021 "What was Jesus' relationship with John the Baptist? Did Jesus baptize people like John? Where did Christian baptism come from? In this book Dr. Dapaah looks at these and other important questions, coming up with some intriguing answers. His well-written work offers thought-provoking insights into the questions of the historical Jesus, and I very warmly commend it."
— David Wenham, Dean and Lecturer, Wycliffe Hall, Oxford University

The Relationship Between Individual and Family in the Caribbean Novel Nov 05 2022

The book studies the relationship between ?Individual and Family? on the broader sense which is explored in the 19 Caribbean novels are divided into four decades(1950?s to 1980?s) which contributes valuably to the comprehension of the Caribbean phenomenon of ?identity?. In the Caribbean context (West Indian context), the struggle for ?identity? is in essence, a struggle for meaningful relatedness

or the sameness with others as human beings, within a society compelled by history into racial and cultural hybridization on the one hand, and the social, economic and political stratification, on the other. The book focuses on psychological and sociological Caribbean context which is different from usual context of understanding. It studies 19 Caribbean novels of 12 writers -

George Lamming, V S Naipaul, Samuel Selvon, Edgar Mittelholtzer, Roger Mais, Wilson Harris, Jean Rhys, Michael Anthony, Merle Hodge, John Hearne, Jamaica Kincaid, and Merle Collins. The novels of these writers explore the uniqueness of the Caribbean society which is ?the microcosm? of the world.
