Survey of Tablet Computer Lending Programs in Libraries May 06 2020 The 80-page study presents the results of a survey of 42 libraries with tablet lending programs or those just about to implement one. The report gives detailed data and commentary on how the programs were organized, financed and implemented and their impact on patrons and libraries. The report helps its readers to answer questions such as: how many tablets do libraries maintain for loan? Which brands do they prefer and which are they planning to purchase in the future? How much have they spent on their tablet

lending programs and plan to spend? Do they load their tablets with apps? If so how do they choose them? How many tablets are lost to theft? Or to negligence or accidents? What is the fine for overdue tablets? What is the length of the lending period? What are the circulation figures for tablets? What has been the impact on other library resources, such as a pre-existing laptop lending program? Or on use of the library's eBook collection? Which libraries do they view as models and what advice can they offer to peers? What services or training are offered to library patrons about how to use the tablets? Data in the report is broken out by library type (public library/public college/private college/special library), by size of library staff, and size of stock of tablet loaned and other variables.

The Hash Function BLAKE Aug 28 2019 This is a comprehensive description of the cryptographic hash function BLAKE, one of the five final contenders in the NIST SHA3 competition, and of BLAKE2, an improved version popular among developers. It describes how BLAKE was designed and why BLAKE2 was developed, and it offers guidelines on implementing and using BLAKE, with a focus on software implementation. In the first two chapters, the authors offer a short introduction to cryptographic hashing, the SHA3 competition and BLAKE. They review applications of cryptographic hashing, they describe some basic notions such as security definitions and state-of-the-art collision search methods and they present SHA1, SHA2 and the SHA3 finalists. In the chapters that follow, the authors give a complete description of the four instances BLAKE-256, BLAKE-512, BLAKE-224 and BLAKE-384; they describe applications of BLAKE, including simple hashing with or without a salt and HMAC and PBKDF2 constructions; they review implementation techniques, from portable C and Python to AVR assembly and vectorized code using SIMD CPU instructions; they describe BLAKE's properties with respect to hardware design for implementation in ASICs or FPGAs; they explain BLAKE's design rationale in detail, from NIST's requirements to the choice of internal parameters; they summarize the known security properties of BLAKE and describe the best attacks on reduced or modified variants; and they present BLAKE2, the successor of BLAKE, starting with motivations and also covering its performance and security aspects. The book concludes with detailed test vectors, a reference portable C implementation of BLAKE, and a list of third-party software implementations of BLAKE and BLAKE2. The book is oriented towards practice -

engineering and craftsmanship – rather than theory. It is suitable for developers, engineers and security professionals engaged with BLAKE and cryptographic hashing in general and for applied cryptography researchers and students who need a consolidated reference and a detailed description of the design process, or guidelines on how to design a cryptographic algorithm.

Pit Stops for Peak Performance Nov 11 2020 Are you a Formula 1 buff? Even if you are not, have you had a chance to watch a Formula 1 (F1) race? It is probably the most grueling race in the world. As you are aware, only the best qualify. These drivers are daredevils. They are physically fit and mentally tough. They are deeply passionate about the sport and have nerves of steel. They are backed by great machines, great automobile research and great support teams. There is nothing really that sets one F1 driver apart from the other among the top 10. If that is so, how is it that some of them win consistently? How are F1 drivers like Michael Schumacher in the past and Sebastian Vettel, Kimi Raikkonen, Lewis Hamilton and Mark Webber in the present so consistent in winning the race every time? What separates winners from those who "almost win"? If this question bothers you, you will find this book interesting. In a race where winning depends on speed and your ability to race ahead of others, what really differentiates winners from others are your SMART STOPS. This includes planned stops as well as unplanned stops. These stops in Formula 1 lingo are called PIT STOPS. Pit stops can make or break a race. "A lot of races are won in the pit," according to IndyCar driver Will Power. Isn't your work as a manager like the Formula 1 race where you are racing for

excellence through the year? If Pit stops differentiate the winners from others, how smart are your pit stops? This book will benefit you and your colleagues if You have to put in disproportionate effort to achieve high performance. It is becoming increasingly difficult to read the market, understand customer preferences, predict competitor moves, shape the organization's culture and be ready for the next disruptive change in the industry. Your team and you are focused most of the time on action and fire fighting and rue if only you had the time to think and reflect. If you are more often than not taken by surprise by the results of a customer feedback survey or employee satisfaction report or the sudden resignation of an employee or a change in market trends. Heart in heart you know that strategic planning, departmental budgeting and individual goal setting exercises of your organization are a farce. Team level trust and work synergies are missing. Annual performance appraisals create more problems than what you bargained for.
