Teach Students How to Learn Mar 30 2022 Miriam, a freshman Calculus student at Louisiana State University, made 37.5% on her first exam but 83% and 93% on the next two. Matt, a first year General Chemistry student at the University of Utah, scored 65% and 55% on his first two exams and 95% on his third—These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Sandra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple, straightforward strategies to use, they can significantly increase their learning and performance. For over a decade Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years, ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with

emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning; finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively, and that readers can be flexible in picking and choosing among the strategies she presents, Saundra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.

Two learning and study strategies inventories are provided to give meaningful information about the strengths and weaknesses of the student's study patterns in ten areas directly related to academic success. For students who want to improve their study skills and the quality of their education.

The HM Learning and Study Skills Program Jan 04 2020 Level III (Grades 11-13) The hm Learning and Study Skills Program: Level III was designed to provide an introduction to learning and study skills for high school juniors and seniors and beginning college students through a series of activity-oriented units. It is structured on the assumption that an activity-oriented lesson is the most effective instructional strategy for the teaching of study skills: more succinctly,

that “learning by doing” is the best way “study smart.” Learning and study skills are important for learning. They are methods and ways of doing things that help make learning easier. Understanding how to study can also facilitate learning by assisting students as they complete assignments correctly and efficiently during a specified period of time. Just like any other skill, knowing how to learn and study proficiently must be learned and practiced over time. The Program has been designed to help students learn more efficiently and effectively. Study Skills Strategies Jul 10 2020 Shows how to use the practice of outlining as an effective strategy for remembering facts and concepts.

Improving Memory and Study Skills Aug 30 2019 In this primary text for a course on study skills, the authors focus on the interrelationships between physical/emotional health and mental powers. They present 12 chapters that talk about the memory system, self-assessment of memory and study skills, the effects of physical and emotional states on studying, memory manipulations and study skills, task specific manipulations, the physical environment and external aids, and the social context. The final chapter offers advice on how to integrate and act on this information. Annotation copyrighted by Book News, Inc., Portland, OR

Spatial Learning Strategies Sep 11 2020 *Spatial Learning Strategies: Techniques, Applications, and Related Issues* reviews the state of the art in spatial learning strategies and suggests ways in

which such strategies (for example, spatial and semantic-network representations) may be more powerfully instantiated in text design and technology applications. Some of the most promising work in the field of learning strategies is documented. Comprised of 15 chapters, this book begins with an introduction to some of the theoretical underpinnings of spatial learning strategies as well as selected theories of information processing. The next section contains reports on specific learner-oriented techniques that have been developed to improve the performances of students with respect to text processing. The discussion then turns to reports on specific techniques that have been developed and applied to other types of processing tasks (for example, test taking, problem solving) or to teacher-author communication, including text analysis and instructional strategies. The application of networking as a learning strategy to hearing-impaired students is also considered, along with schematizing, mapping, and concept structuring. The book concludes by assessing the implications of spatial strategies for education and applied research. This monograph will be of interest to behaviorists, cognitive and educational psychologists, teachers, school administrators, and policymakers.
