The Promise of Adolescence Aug 21 2021 Adolescence "beginning with the onset of puberty and ending in the mid-20s" is a critical period of development during which key areas of the brain mature and develop. These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of adolescence "rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and inequalities in opportunity, enabling all adolescents to flourish.

Discrimination in Childhood and Adolescence Feb 24 2022 Discrimination impacts most youth at some point. Almost all children and adolescents belong to at least one stigmatized group, whether they are a Black or Latino boy in school; an immigrant or refugee; a gay, lesbian, or bisexual teen; or a girl in physics class. Discrimination on the basis of race/ethnicity, immigration status, gender, sexual orientation, and gender identity can have long-term academic, psychological, and social repercussions, especially when it is directed at a cognitively developing child or an emotionally vulnerable adolescent. How children and adolescents are impacted by this discrimination depends on their cognitive ability to perceive the bias, the context in which the bias occurs, and resources they have to help cope with the bias. This book details, synthesizes, and analyzes the perception and impact of discrimination in childhood and adolescence across multiple stigmatized social groups to help us better understand the complex phenomenon of discrimination and its long-term consequences. By looking at the similarities and differences in discrimination across all social groups, we can more fully understand its mechanisms of influence. Before we can fully address the persistent achievement gap between White and ethnic minority children, the high rates of suicidal thoughts among LGBT youth, and the underrepresentation of girls in STEM careers, we must first examine the ways in which discrimination influences and is understood by children, with their unique cognitive constraints and within the specific contexts in which they live.

The Art of Childhood and Adolescence Nov 23 2021 The Art of Childhood and Adolescence is composed of completely new research on the development of representational thinking from infancy through to adolescence. The book draws on highly detailed longitudinal studies, conducted over 24 years (20 in London and 4 in Singapore). Line drawings and photographs are used to illustrate important concepts. Matthews, highly respected internationally, also sheds light on current debates, such as the opposition of culturally specific and universal development in children the world over.

Sibling Relationships in Childhood and Adolescence Oct 30 2019 The most long-lasting and enduring relationship an individual can develop is with a sibling. Considering the closeness in age and early association of siblings, they can bond for a lifetime. Psychologists are beginning to appreciate the sibling link and its dynamic role in a child's social development. Beyond the mother-child dyad, sibling associations are now attributed with determining cognitive faculties, emotional balance, self-sufficiency, and peer interactions. Clarifying the complex processes of these relationships and the benefit of parental involvement, Avidan Milevsky provides a foundational text for a growing area of study. Deploying personal narrative, theoretical examinations, and empirical data, he unravels the intricacies of the sibling exchange and their function in overall family structures. He identifies the factors that make such bonds successful (or harmful) and the influence of parents in shaping these outcomes. He also evaluates the compensatory possibilities of the sibling bond when faced with the absence of a parent or friend. Variables such as age, birth order, gender, and family size are tremendous considerations, and parents hoping to enhance the sibling bond gain immensely from understanding these predictors. Milevsky shows practitioners how to educate parents and help them apply their knowledge in practice. He particularly supplies crucial perspective on "deidentification," or conscious differentiation, in which parents encourage different life paths to minimize sibling comparison and competition. A major tool for clinicians, social service providers, and educators, this book clarifies the next frontier in child development research.

Interpersonal Trust during Childhood and Adolescence Jan 02 2020 Since the beginnings of psychology as a discipline, interpersonal trust has been regarded as a crucial aspect of human functioning. This book presents research in the growing field of interpersonal trust during childhood and adolescence (up to the onset of adulthood). It deals with the extent to which children and adolescents demonstrate the multiple facets of trust and trustworthiness, and how these multiple facets affect their social relationships with a wide range of social contacts: parents, peers, and social groups. It will be of interest to developmental, social, educational and clinical psychologists.

The Growth of Logical Thinking from Childhood to Adolescence Apr 28 2022 This book has two aims: to set forth a description of changes in logical operations between childhood and adolescence and to describe the formal structures that mark the completion of the operational development of intelligence. To tie these together the authors have tried to present the material in a way that would stress the close relationship between the two. Each of the first fifteen chapters (Parts I and II) includes an experimental part by the first author and a brief final analysis by the second author. This analysis aims to isolate the formal or propositional structures found in each case. Chapters 16 and 17 (beginning of Part III) are the work of the second author, whereas Chapter 18 is a joint production. In addition, the specific problems of experimental induction analyzed from a functional standpoint (as distinguished from the present structural analysis) will be the subject of a special work by the first author.
