**Modern Equity Investing Strategies** Aug 10 2021 This book will satisfy the demand among college majors in Finance and Financial Engineering, and mathematically-versed practitioners for description of both the classical approaches to equity investing and new investment strategies scattered in the periodic literature. Besides the major portfolio management theories (mean variance theory, CAPM, and APT), the book addresses several important topics: portfolio diversification, optimal ESG portfolios, factor models (smart betas), robust portfolio optimization, risk-based asset allocation, statistical arbitrage, alternative data based investing, back-testing of trading strategies, modern market

microstructure, algorithmic trading, and agent-based modeling of financial markets. The book also includes the basic elements of time series analysis in the Appendix for self-contained presentation of the material. While the book covers technical concepts and models, it will not overburden the reader with math beyond the Finance undergraduates' curriculum.

**The Mahalanobis Growth Model** Sep 23 2022 This book provides an analytical and computational approach to solving and simulating the Mahalanobis model and the papers surrounding it. The book comes up, perhaps for the first time, with a holistic examination of an important growth model that emerged out of India in the 1950s. It contains detailed derivations of the Mahalanobis model and the several critiques and extensions surrounding it with an organized synthesis of the main results. Computationally, the book simulates the model and its many variants, thus making it accessible to a wider audience. Advanced undergraduates and beginning graduate students in the fields of Economics, Mathematics, and Statistics will gain immensely from understanding both the mathematical aspects as well as the computational aspects of the Mahalanobis model. In the absence of a single 'go-to' source on all aspects of the model -- analytical and computational -- this book is a definitive volume on the Mahalanobis model that has all the derivations of all the papers surrounding the model, its dissents and critiques, and extensions as in the wage goods model suggested by Vakil and Brahmaanda.

[Antique American Tractor and Crawler Value Guide, Second Edition](#) Nov 25 2022 Following the rating system generally established among car collectors, this comprehensive value guide provides the values, in five degrees of condition, of antique American farm tractors and crawlers built from the turn of the century through the 1950s. Each chapter is devoted to one of the period's major manufacturers -- John Deere, Farmall, Caterpillar, Oliver, Minneapolis-Moline, Ford, and more -- and the values listed are based on prices actually realized at auction. In addition, two expert collectors compare their notes on each model, while the expert photography of Randy Leffingwell depicts the tractors and

crawlers discussed.

*Automating Linguistics* Apr 06 2021 Automating Linguistics offers an in-depth study of the history of the mathematisation and automation of the sciences of language. In the wake of the first mathematisation of the 1930s, two waves followed: machine translation in the 1950s and the development of computational linguistics and natural language processing in the 1960s. These waves were pivotal given the work of large computerised corpora in the 1990s and the unprecedented technological development of computers and software. Early machine translation was devised as a war technology originating in the sciences of war, amidst the amalgamate of mathematics, physics, logics, neurosciences, acoustics, and emerging sciences such as cybernetics and information theory. Machine translation was intended to provide mass translations for strategic purposes during the Cold War. Linguistics, in turn, did not belong to the sciences of war, and played a minor role in the pioneering projects of machine translation. Comparing the two trends, the present book reveals how the sciences of language gradually integrated the technologies of computing and software, resulting in the second-wave mathematisation of the study of language, which may be called mathematisation-automation. The integration took on various shapes contingent upon cultural and linguistic traditions (USA, ex-USSR, Great Britain and France). By contrast, working with large corpora in the 1990s, though enabled by unprecedented development of computing and software, was primarily a continuation of traditional approaches in the

sciences of language sciences, such as the study of spoken and written texts, lexicography, and statistical studies of vocabulary.

**Values and Practice in Children's Services** Aug 18 2019 Values and their application are a continuing area of concern for those involved in work with children and families. This book provides a means of understanding models of social welfare and children's services, and relating these to the challenges of practice. Key debates about values in children's services are identified and examined, in their legislative, policy and practice contexts. The text develops a range of approaches to practice, utilizing case examples to illustrate the challenges, and to help practitioners with the task of reconciling competing expectations in their work with children. New to this Edition: - Increased coverage of authoritarian states and hybrid regimes - A wider range of international case studies than ever before, particularly including expanded coverage of Latin America and Africa - A resource-packed companion website featuring student and lecturer materials such as interactive quizzes, video tutorials, essay papers, testbanks and an exclusive web-only chapter on Political Economy

Urbanization and Growth Oct 24 2022 Why is productivity higher in cities? Does urbanization cause growth or does growth cause urbanization? Do countries achieve rapid growth or high incomes without urbanization? How can policy makers reap the benefits of urbanization without paying too high a cost? Does supporting urbanization imply neglecting rural areas? Why do so few governments welcome urbanization? What should governments do to improve housing conditions in cities as they urbanize? Are innovations in housing finance a blessing or a curse for developing countries? How will governments finance the trillions of dollars of infrastructure spending needed for cities in developing countries? First in a series of thematic volumes, this book was prepared for the Commission on Growth and Development to evaluate the state of knowledge of the relationship between urbanization and economic growth. It does not pretend to provide all the answers, but

it does identify insights and policy levers to help countries make urbanization work as part of a national growth strategy. It examines a variety of topics: the relevance and policy implications of recent advances in urban economics for developing countries, the role of economic geography in global economic trends and trade patterns, the impacts of urbanization on spatial inequality within countries, and alternative approaches to financing the substantial infrastructure investments required in developing-country cities. Written by prominent academics in their fields, *Urbanization and Growth* seeks to create a better understanding of the role of urbanization in growth and to inform policy makers tackling the formidable challenges it poses.

**Positive Social Behavior and Morality** Jun 27 2020 *Positive Social Behavior and Morality: Social and Personal Influences, Volume I* presents the broad range of influences that encourage or inhibit people to behave positively towards others and how varied forms of positive behavior are determined. The book examines the various aspects of positive social behavior. It starts by providing the definition, significance, and relationship of positive or prosocial behavior to morality. Topics on why people behave prosocially; the determinants of people helping other people in physical distress; effects of harm doing on prosocial behavior; the limitations of current methods; the goals for future study in the field of prosocial behavior; and a theoretical model for predicting prosocial behavior are presented as well. Psychologists, sociologists, researchers, and students in the field of sociology and psychology will find this book interesting.

**Ecological Modeling in Risk Assessment** Mar 17 2022 Toxic

chemicals can exert effects on all levels of the biological hierarchy, from cells to organs to organisms to populations to entire ecosystems. However, most risk assessment models express their results in terms of effects on individual organisms, without corresponding information on how populations, groups of species, or whole ecosystems may respond to chemical stressors. *Ecological Modeling in Risk Assessment: Chemical Effects on Populations, Ecosystems, and Landscapes* takes a new approach by compiling and evaluating models that can be used in assessing risk at the population, ecosystem, and landscape levels. The authors give an overview of the current process of ecological risk assessment for toxic chemicals and of how modeling of populations, ecosystems, and landscapes could improve the status quo. They present a classification of ecological models and explain the differences between population, ecosystem, landscape, and toxicity-extrapolation models. The authors describe the model evaluation process and define evaluation criteria. Finally, the results of the model evaluations are presented in a concise format with recommendations on modeling approaches to use now and develop further. The authors present and evaluate various models on the basis of their realism and complexity, prediction of relevant assessment endpoints, treatment of uncertainty, regulatory acceptance, resource efficiency, and other criteria. They provide models that will improve the ecological relevance of risk assessments and make data collection more cost-effective. *Ecological Modeling in Risk Assessment* serves as a reference for selecting and applying the best models when performing a risk assessment.

**International Gear Conference 2014: 26th-28th August 2014, Lyon**

Mar 05 2021 This book presents papers from the International Gear Conference 2014, held in Lyon, 26th-28th August 2014. Mechanical transmission components such as gears, rolling element bearings, CVTs, belts and chains are present in every industrial sector and over recent years, increasing competitive pressure and environmental concerns have provided an impetus for cleaner, more efficient and quieter units. Moreover, the emergence of relatively new applications such as wind turbines, hybrid transmissions and jet engines has led to even more severe constraints. The main objective of this conference is to provide a forum for the most recent advances, addressing the challenges in modern mechanical transmissions. The conference proceedings address all aspects of gear and power transmission technology and range of applications (aerospace, automotive, wind turbine, and others) including topical issues such as power losses and efficiency, gear vibrations and noise, lubrication, contact failures, tribo-dynamics and nano transmissions. A truly international contribution with more than 120 papers from all over the world A judicious balance between fundamental research and industrial concerns Participation of the most respected international experts in the field of gearing A wide range of applications in terms of size, power, speed, and industrial sector
