New Insights into ECCU's Tourism Sector Competitiveness Sep 04 2020 Tourism has become the main driver of economic growth and employment and the most important source of income in the ECCU. Preserving and, possibly, enhancing the competitiveness of the tourism product is key for these countries. Unfortunately, the evidence shows that tourism arrivals to the ECCU have been declining slightly while global demand for tourism is on the rise. The objective of this paper is to study the structural determinants of competitiveness for the ECCU, defined as the relative cost advantage over other touristic regions (Di Bella, Lewis, and Martin 2007). Using a gravity model, we show that proximity to North American and European markets is indeed an important competitive advantage for the ECCU. However, despite this advantage, and, in some cases, specialization in high-end tourism, regression analysis shows that arrivals to the ECCU are sensitive to relative prices. Our simulations show that mitigating supply-side constraints would improve the ECCU's competitiveness and allow the region to regain global market shares.

New Insights into Fibromyalgia Jan 13 2021 Given the potential problems that can obscure any scientific enterprise, inconsistent results across studies are bound to occur. How are we to decide what is true? Let's turn to philosophy for a reasonable answer. The mathematician-philosopher Bertrand Russell approached a similar problem in his monograph *The Problems of Philosophy* (Russell B, 1912). He addressed the following question: How do we know that anything is "real"? Is the only reality subjective and simply in our minds, as Bishop Berkeley challenged, or can we mostly believe the objective reality? His pragmatic answer: All possibilities may be true, but when the preponderance of evidence indicates that objective reality and knowledge are the most probable case, go with it. If the preponderance of all evidence about the clinical description of fibromyalgia and its pathogenic mechanisms and treatment strategies indicate a highly probable interrelated hypothesis, go with it. The direction of the literature on the whole trumps the less likely tangents. At the same time, remember Bertrand Russell and his pragmatic answer, and keep an open mind.

New Insights into Cell Culture Technology Dec 19 2021 The book "New Insights into Cell Culture Technology" focuses on many advanced methods and techniques concerned with cell culture. The contributing authors have discussed various developments in cell culture methods, the application of insect cells for the efficient production of heterologous proteins, the expansion of human mesenchymal stromal cells for different clinical applications, the remote sensing of cell culture experiments and concepts for the development of cell culture bioprocess, continuous production of retroviral pseudovirus vectors, and the production of oncolytic measles virus vectors for cancer therapy. This book is an original contribution of experts from different parts of the globe, and the in-depth information will be a significant resource for students, scientists, and physicians who are directly dealing with cells. "Culture" is essential for human life and also the life of a cell. - Sivakumar Gowder

New Insights into the Semantics of Legal Concepts and the Legal Dictionary Nov 25 2019 This book focuses on legal concepts from the dual perspective of law and terminology. While legal concepts frame legal knowledge and take center stage in law, the discipline of terminology has traditionally been about concept description. Exploring topics common to both disciplines such as meaning, conceptualization and specialized knowledge transfer, the book gives a state-of-the-art account of legal interpretation, legal translation and legal lexicography with special emphasis on EU law. The special give-and-take of law and terminology is illuminated by real-life legal cases which demystify the ways courts do things with concepts. This original approach to the semantics of legal concepts is then incorporated into the making of a legal dictionary, thus filling a gap in the theory and practice of legal lexicography. With its rich repertoire of examples of legal terms in different languages, the book provides a blend of theory and practice, making it a valuable resource not only for scholars of law, language and lexicography but also for legal translators and students.

New Insights into Membrane Science and Technology: Polymeric and Biofunctional Membranes Aug 27 2022 Membrane techniques provide a broad science and technology base. Although there are several books in the traditional membrane field, there is a great need for a highly comprehensive book. This refereed book covers materials from highly respected researchers. This title is highly multidisciplinary in nature and should be extremely valuable to scientists and engineers involved in a variety of activities.

Students and faculty members around the world will find this title to be an excellent reference book. Invited contributions from leading researchers in the field Coverage of topic is of value to scientists/engineers working in a variety of related fields [separations/fractions, advanced biofunctional materials, contactor designs] Aims to fill market gap for a highly comprehensive book containing advances in both synthetic and biofunctional/biominetic membranes

New Insights into Microbial Ecology through Subtle Nucleotide Variation Jan 01 2020 The 16S ribosomal RNA gene commonly serves as a molecular marker for investigating microbial community composition and structure. Vast amounts of 16S rRNA amplicon data generated from environmental samples thanks to the recent advances in sequencing technologies allowed microbial ecologists to explore microbial community dynamics over temporal and spatial scales deeper than ever before. However, widely used methods for the analysis of bacterial communities generally ignore subtle nucleotide variations among high-throughput sequencing reads and often fail to resolve ecologically meaningful differences between closely related organisms in complex microbial datasets. Lack of proper partitioning of the sequencing data into relevant units often masks important ecological patterns. Our research topic contains articles that use oligotyping to demonstrate the importance of high-resolution analyses of marker gene data, and provides further evidence why microbial ecologists should open the "black box" of OTUs identified through arbitrary sequence similarity thresholds.

It's All in Your Head May 12 2021 A neurologist explores the very real world of psychosomatic illness. Pauline first became ill when she was fifteen. What seemed to be a urinary infection became joint pain, then life-threatening appendicitis. After a routine operation Pauline lost all the strength in her legs. Shortly afterwards, convulsions started. But Pauline's tests are normal: her symptoms seem to have no physical cause whatsoever. This may be an extreme case, but Pauline is not alone. As many as a third of people visiting their GP have symptoms that are medically unexplained. In most, an emotional root is suspected which is often the last thing a patient wants to hear and a doctor to say. We accept our hearts can flutter with excitement and our brows can sweat with nerves, but on this journey into the very real world of psychosomatic illness, Suzanne O'Sullivan finds the secrets we are all capable of keeping from ourselves. 'A fascinating glimpse into the human condition... a forceful call for society to be more open about such suffering.' Daily Mail 'Honest, fascinating and necessary' The Times

New Insights into Toxicity and Drug Testing Mar 22 2022 This book "New Insights into Toxicity and Drug Testing" covers all emerging technologies (profiling technologies, 3D cultures, next generation sequencing etc.), available methods and models to evaluate candidate drugs and medicinal plants with reference to toxicity, drug testing and development. This book is an original contribution of experts from different parts of the globe and the in-depth information will be a significant resource for scientists and physicians who are directly dealing with drugs /medicines and human life.

New Insights into Systemic Sclerosis Jul 22 2019 Systemic sclerosis (scleroderma) is an incurable connective tissue disease of unknown etiology. Three key processes play a pivotal role in the pathogenesis: immune dysregulation and inflammation, endothelial injury and vasculopathy, and fibrosis. Tissue fibrosis is the dominant and characteristic feature that affects the skin and visceral organs. Life expectancy of scleroderma patients has improved over recent years, mainly because of better treatment of organ involvement and complications; however, no curative disease-modifying therapies exist to date. This book aims to provide students, trainees, rheumatologists, and other specialists interested in this disease with a comprehensive overview of novel pathogenetic mechanisms, management approaches, and therapeutic targets of several major vascular and fibrotic manifestations, and is useful insight into a number of usually neglected aspects of scleroderma.

New Insights Into the Provision of Health Services in Indonesia Jun 20 2022 Over the past decade, Indonesia has implemented significant health sector reforms that include decentralizing responsibilities for service delivery, designing incentives for health providers, increasing the supply of midwives in remote areas, and analyzing demographic and epidemiological transitions causing changes in the patterns of disease prevalence. Financial protection against catastrophic expenditures has improved substantially, and legislation has been enacted to improve the quality of physician training and patient care. Despite the progress, substantial challenges remain and include comparatively low resources for the health sector, limitations in the supply of providers at the primary and hospital levels, inefficient payment systems, shortcomings in the quality of maternal and child and adult care, lack of oversight and effective licensing in an expanding private health sector, and ineffective planning for and recruitment and retention of health workers. Given the slow pace in improving health outcomes and limited evidence linking health performance and the health workforce, the need to make more information available about past experiences to inform future policy changes is pressing. Few studies have been undertaken to measure the actual impact of the reforms and the remaining challenges. 'New Insights into the Provision of Health Services in Indonesia: A Health Workforce Study' begins the process, providing real time evidence-based inputs to facilitate the Government of Indonesia's comprehensive health sector review. The authors' analysis of panel data from households and health providers will assist the government's assessment of the impact of past health work force policies and its consideration of policy changes.

New Insights into the Future of Pharmacoeconomics and Drug Safety Feb 27 2020 In the last decade, pharmacoeconomics has emerged as an important field to study the use/effects of drugs in large populations in real life, allowing for improved benefits and effectiveness of drugs as well as a decline in drug-related risks. The correct assessment, reporting, monitoring, and prevention of adverse events in drugs' development, as well as therapy and post-market surveillance, is essential to improve clinical therapies and health outcomes. This book provides a comprehensive and unique overview of the relevance, new insights, and recent findings of pharmacoeconomics and drug safety in public health.

New Insights Into Metabolic Syndrome Jan 08 2021 Contributors to this book have reviewed research from the fields of metabolic syndromes in view of their own research. The chapters cover the neural mechanisms of food intake and proposed factors related to obesity. The influences of the intake of sugar and lipids are also discussed. The relationships between cancer and venous thromboembolism in connection with obesity are discussed. Omega (ω) fatty acids and trans-fatty acids are risks of cardiovascular diseases. Comparison of plasma levels of trans-fatty acids indicated that industrially produced trans-fatty acids are higher in American than Japanese men. Hopefully, the book provides information that readers want to obtain in the fields of food intake and metabolic syndromes.

New Insights into Anxiety Disorders Feb 09 2021 This book collects the contributions of a number of clinical psychiatrists all over the world, interested in developing basic research about anxiety and in applying it in clinical contexts. It is divided into four sections, covering general issues about anxiety (etiological and developmental ones), basic research issues on specific aspects of anxiety (bioanatomical ones, correlation with personality structure and so on), and new clinical and therapeutic proposals and hypotheses. Each author summarized the clinical importance of his work, underlining the clinical pitfalls of this publication.

Schooling for Tomorrow: Personalising Education Sep 23 2019 This book examines the various approaches to, key policy challenges confronting, and constraints imposed on personalising education.

New Insights Into Language Anxiety Jun 20 2019 This book provides an overview of current theory, research and practice in the field of language anxiety and brings together a range of perspectives on this psychological construct in a single volume. Chapters show that language anxiety can be viewed as a complex and dynamic construct and can be researched using different methods and frameworks.

New Insights into the Theory of Giffen Goods Aug 03 2020 One might expect that after their identification in the 19th century, all aspects of Giffen goods would have been studied by now. This appears not to be the case. This book contains the latest insights into the theory of Giffen goods. In the past, surprisingly few goods could be categorized as "Giffen." This may be because of a lack of understanding of the character of these goods. Therefore, the theories explained in this book may also produce a solid basis for further empirical research in the field. Experts throughout the world have contributed to this book, which predominantly pursues a mathematically rigorous approach. It may be used by researchers in the field of fundamental economics and in graduate-level courses in advanced microeconomics.

New Insights into Morphometry Studies Mar 10 2021 There have been brilliant studies in the field of morphometry in recent years. This book increases the literature on this domain by presenting some recent advances and emerging applications upon biological structures, ranging in a variety of purposes and objectives: from animal visual system to growth models, from amphibians to humans, all in a comprehensive and accessible way of information. All chapters are written by leading internationally recognized experts from academia, who explain their own topics in plain English and in a totally rigorous manner. Suitable for a wide range of expert readers, this book represents a high valuable work for scientists and advanced students working in biological and medical morphometric topics.

New Insights into Glomerulonephritis Jul 14 2021 Chinese, Asian and global perspectives Chronic kidney disease is a global major health issue that ultimately leads to end-stage renal disease, a devastating condition requiring costly renal replacement therapy. Given this background, extensive understanding of the pathogenesis of the disease and exploring novel therapeutic targets will help to alleviate disease progression, improve prognosis and reduce its impact on the global economic burden. Currently, primary glomerulonephritis is the leading cause of chronic kidney disease and end-stage renal disease in China and many other countries. Recently, there has been much progress with regard to pathogenesis as well as treatment of primary glomerulonephritis. Clinical data from Chinese studies have significantly contributed to the making of international guidelines and histological classifications of the disease. This book focuses on the cutting-edge knowledge and provides up-to-date information on primary glomerulonephritis. Topics covered are IgA nephropathy, focal segmental glomerulosclerosis, membranous nephropathy, membranoproliferative glomerulonephritis, and crescentic glomerulonephritis.
