Overwhelmed Apr 21 2022 Can working parents in America—or anywhere—ever find true leisure time? According to the Leisure Studies Department at the University of Iowa, true leisure is "that place in which we realize our humanity." If that's true, argues Brigid Schulte, then we're doing dangerously little realizing of our humanity. In *Overwhelmed*, Schulte, a staff writer for *The Washington Post*, asks: Are our brains, our partners, our culture, and our bosses making it impossible for us to experience anything but "contaminated time." Schulte first asked this question in a 2010 feature for *The Washington Post Magazine*: "How did researchers compile this statistic that said we were rolling in leisure—over four hours a day? Did any of us feel that we actually had downtime? Was there anything useful in their research—anything we could do?" A *New York Times* bestseller, *Overwhelmed* is a map of the stresses that have ripped our leisure to shreds, and a look at how to put the pieces back together. Schulte speaks to neuroscientists, sociologists, and hundreds of working parents to tease out the factors contributing to our collective sense of being overwhelmed, seeking insights, answers, and inspiration. She investigates progressive offices trying to invent a new kind of workplace; she travels across Europe to get a sense of how other countries accommodate working parents; she finds younger couples who claim to have figured out an ideal division of chores, childcare, and meaningful paid work. *Overwhelmed* is the story of what she found out.

The Battle Over Health Care Jul 24 2022 As the most substantial health care reform in almost half a century, President Obama's health care overhaul was as historic as it was divisive. In its aftermath, the debate continues. Drawing on decades of experience in health care policy, health care delivery reform, and economics, Rosemary Gibson and Janardan Prasad Singh provide a non-partisan analysis of the reform and what it means for America and its future. The authors shine a light on truths that have been hidden behind a raucous debate marred by political correctness on both sides of the aisle. They show how health care reform was

enacted only with the consent of health insurance companies, drug firms, device manufacturers, hospitals, and other special interests that comprise the medical-industrial complex, which gained millions of new customers with the stroke of a pen. Health care businesses in a market-oriented system are designed to generate revenue, which runs counter to affordable health care. Gibson and Singh take a broader perspective on health care reform not as a single issue but as part of the economic life of the nation. The national debate unfolded while the banking and financial system teetered on the brink of collapse. The authors trace uncanny similarities between the health care industry and the unfettered banking and financial sector. They argue that a fast-changing global economy will have profound implications for the country's economic security and the jobs and health care benefits that come with it, and they predict that global competition will shape the future of employer-provided insurance more than the health care reform law.

[Irrationality in Health Care](#) Sep 26 2022 The health care industry in the U.S. is peculiar. We spend close to 18% of our GDP on health care, yet other countries get better results—and we don't know why. To date, we still lack widely accepted answers to simple questions, such as "Would requiring everyone to buy health insurance make us better off?" Drawing on behavioral economics as an alternative to the standard tools of health economics, author Douglas E. Hough seeks to more clearly diagnose the ills of health care today. A behavioral perspective makes sense of key contradictions—from the seemingly irrational choices that we sometimes make as patients, to the incongruous behavior of physicians, to the morass of the long-lived debate surrounding reform. With the new health care law in effect, it is more important than ever that consumers, health care industry leaders, and the policymakers who are governing change reckon with the power and sources of our behavior when it comes to health.

[Past Caring](#) Nov 16 2021 At a lush villa on the sun-soaked island of Madeira, Martin Radford is given a second chance. His life ruined by

scandal, Martin holds in his hands the leather-bound journal of another ruined man, former British cabinet minister Edwin Strafford. What's more, Martin is being offered a job—to return to England and investigate the rise and fall of Strafford, an ambitious young politician whose downfall, in 1910, is as mysterious as the strange deaths that still haunt his family. Martin is intrigued by Strafford's story, by the man's overwhelming love for a beautiful suffragette, by her inexplicable rejection of him and their love affair's political repercussions. But as he retraces Strafford's ruination, Martin realizes that Strafford did not fall by chance; he was pushed. Suddenly Martin, who has not cared for many people in his life, cares desperately—about a man's mysterious death and a family's terrible secret, about a love beyond reckoning and betrayal beyond imagining. Most of all Martin cares because the story he is uncovering is not yet over—and among the men and women still caught in its web, Martin himself may be the most vulnerable of all....

From Crisis to Calling Jul 12 2021 Making the Hardest Decisions As a young aid worker, Sasha Chanoff was sent to evacuate a group of refugees from the violence-torn Congo. But when he arrived he discovered a second group. Evacuating them too could endanger the entire mission. But leaving them behind would mean their certain death. All leaders face defining moments, when values are in conflict and decisions impact lives. Why is moral courage the essential factor at such times? How do we access our own rock-bottom values, and how can we take advantage of them to make the best decisions? Through Sasha's own extraordinary story and those of eight other brave leaders from business, government, nongovernment organizations, and the military, this book reveals five principles for confronting crucial decisions and inspires all of us to use our moral core as a lodestar for leadership.

The Delegated Welfare State Jan 18 2022 Why are so many American social programs delegated to private actors? And what are the consequences for efficiency, accountability, and the well-being of beneficiaries? The Delegated Welfare State examines the development of the American welfare state through the lens of delegation: how policymakers have avoided direct governmental provision of benefits and services, turning to non-state actors for the governance of social programs. Utilizing case studies of Medicare and the 2009-10 health care reform, Morgan and Campbell argue that the prevalence of delegated governance reflects the powerful role of interest groups in American politics, the dominance of Congress in social policymaking, and deep contradictions in American public opinion. Americans want both social programs and small government, leaving policy makers in a bind. Contracting out public programs to non-state actors masks the role of the state and enlists private allies who push for passage. Although delegated governance has been politically expedient, enabling the growth of government programs in an anti-government political climate, it raises questions about fraud, abuse, administrative effectiveness, and accountability. In probing both the causes and consequences of delegated governance, The Delegated Welfare State offers a novel interpretation of both American social welfare politics and the nature of the American state.

Mired in the Health Care Morass Oct 27 2022 Mired in the Morass describes a predicament known to almost 47 million Americans: paying for medical bills without health insurance. Neil Davis navigated this financial black hole and discovered a hidden truth: medical bills don't reflect the costs of medicine. Davis describes the harrowing journey his family took in paying for cancer treatments, and comes to the well-informed conclusion that our health care system is broken, and doesn't have much to do with

health. Yet, there is hope: armed with the knowledge Davis provides, you too may get a correct and detailed accounting of what you actually owe—often far less than the hospital bill might imply. If enough Americans understand the true costs, both in money and in deaths from reliance on a crippled system, we may be able to change to a fairer, more rational, healthier system for all of us.

Ethics in Psychology and the Mental Health Professions Mar 20 2022 Most mental health professionals and behavioral scientists enter the field with a strong desire to help others, but clinical practice and research endeavors often involve decision-making in the context of ethical ambiguity. Good intentions are important, but unfortunately, they do not always protect the practitioner and client from breaches in ethical conduct. Academics, researchers, and students also face a range of ethical challenges from the classroom to the laboratory. Now in a new expanded edition, *Ethics in Psychology and the Mental Health Professions*, the most widely read and cited ethics textbook in psychology, has emerged with a broadened scope extending across the mental health and behavioral science fields. The revised volume considers many of the ethical questions and dilemmas that mental health professionals encounter in their everyday practice, research, and teaching. The book has been completely updated and is now also relevant for counselors, marriage and family therapists, social workers, and psychiatrists, and includes the ethics codes of those groups as appendices. Providing both a critical assessment and elucidation of key topics in the APA's guidelines, this comprehensive volume takes a practical approach to ethics and offers constructive means for both preventing problems, recognizing, approaching, and resolving ethical predicaments. Written in a highly readable and accessible style, this new edition retains the key features which have contributed to its popularity, including hundreds of case studies that provide illustrative guidance on a wide variety of topics, including fee setting, advertising for clients, research ethics, sexual attraction, how to confront observed unethical conduct in others, and confidentiality, among others. *Ethics in Psychology and the Mental Health Professions* will be important reading for practitioners and students-in-training. Hand of Evil Mar 08 2021 Struggling with the fallout of a failed marriage and halted career, former L.A. news anchorwoman Ali Reynolds finds her tenacious new life in her Arizona hometown threatened by the murder of a real estate tycoon, a case that places her at a crossroads between old loyalties and new friendships. Reprint.

The Bidens May 10 2021 A deeply reported exploration of Joe Biden as told through his extended family. Coming off of the 2020 election, THE BIDENS tells the Biden Family story in full, from the secrets lurking in the deep recesses of Joe's family tree to his son Hunter's foreign deal-making spree—and the Trump gang's ham-handed efforts to exploit it. On November 3, Americans did not just elect Joe Biden: They got a package deal. The tight-knit Biden family—siblings, children, in-laws, and beyond—is coming right along with him. They are sure to play a defining role in his presidency, just as they have in every other one of his endeavors. Inside, you'll find these and other stories and revelations about the Biden family, including: Joe's childhood, the stunning 1972 Senate upset engineered by his sister Valerie, and the car accident that took the lives of his first wife and infant daughter soon after Joe's early years in the Senate and his role in the creation of the cozy "Delaware Way" of conducting politics. The Biden brothers' business escapades, including the '70s rock club rivalry that pitted Jim Biden against Jill's first husband and ended in a banking scandal. The Delaware lawman who oversaw an FBI investigation into Joe's 2007 campaign fundraising and now has Hunter in his sights. Hunter's surprisingly close friendship with his Fox News antagonist, Tucker Carlson. What Steve Bannon really hoped to accomplish by giving the contents of "the Laptop from Hell" to the New York Post. New evidence that sheds light on the authenticity of Hunter's alleged computer files. Like the Kennedys before them, the Bidens are a tight-knit, idealistic Irish Catholic clan with good looks, dynastic ambitions, and serious personal problems. As THE BIDENS reveals, the best way to understand Joe Biden—his values, fears, and motives—is to understand his family: Their Irish (and not-so-Irish) roots, their place in the Delaware pecking order, their dodgy business deals, and their personal struggles and triumphs alike.

An Introduction to the Sociology of Work and Occupations Dec 25 2019 *The Sociology of Work and Occupations, Second Edition* connects work and occupations to the key subjects of sociological inquiry: social and technological change, race, ethnicity, gender, social class, education, social networks, and modes of organization. In 15 chapters, Rudi Volti succinctly but comprehensively covers the changes in the world of work, encompassing

everything from gathering and hunting to working in today's Information Age. This book introduces students to a highly relevant analysis of society today. In this new and updated edition, globalization and technology are each given their own chapter and discussed in great depth.

Tort Law in Focus Aug 21 2019 Tort doctrine is complex and nuanced on its own; a torts casebook that mystifies first year students will not help them develop the core skill of legal analysis. Tort Law in Focus presents concepts in a way that students can understand and apply. Rather than hide the ball, Geoffrey Rapp explains new terms clearly, and guides students in the specific techniques of applying tort law to practice-based problems. Along with concrete examples, Tort Law in Focus provides clear and thorough introductions to those areas of tort law (such as proximate cause under the dominant and new Restatement approaches; res ipsa; factual cause, including but-for cause and alternatives in special cases like indivisible injuries and alternative causes; the duty of owners and occupiers of land; and comparative negligence) that are especially challenging for first-year law students. Professors and Students Will Benefit From: Clear introductions and transitional text that frame key rules, concepts, and cases A wide selection of modern, high-interest cases that apply dominant legal rules, and which, where possible, interpret and apply the Restatement (Third) Summaries and discussion of canonical cases that convey the history and context of modern tort law Examples, flow charts and maps that illustrate concepts, rules, and the relationships among parties and interests Consistent use of problems that encourage students to implement "IRAC" (or equivalent) strategies for structuring their analysis Samples of documents commonly used in tort law practice, such as demand letters and complaints

Communities of Care Jul 20 2019 What we can learn about caregiving and community from the Victorian novel In *Communities of Care*, Talia Schaffer explores Victorian fictional representations of care communities, small voluntary groups that coalesce around someone in need. Drawing lessons from Victorian sociality, Schaffer proposes a theory of communal care and a mode of critical reading centered on an ethics of care. In the Victorian era, medical science offered little hope for cure of illness or disability, and chronic invalidism and lengthy convalescences were common. Small communities might gather around afflicted individuals to minister to their needs and palliate their suffering. *Communities of Care* examines these groups in the novels of Jane Austen, Charlotte Brontë, Charles Dickens, George Eliot, Henry James, and Charlotte Yonge, and studies the relationships that they exemplify. How do carers become part of the community? How do they negotiate status? How do caring emotions develop? And what does it mean to think of care as an activity rather than a feeling? Contrasting the Victorian emphasis on community and social structure with modern individualism and interiority, Schaffer's sympathetic readings draw us closer to the worldview from which these novels emerged. Schaffer also considers the ways in which these models of carework could inform and improve practice in criticism, in teaching,

and in our daily lives. Through the lens of care, Schaffer discovers a vital form of communal relationship in the Victorian novel.

Communities of Care also demonstrates that literary criticism done well is the best care that scholars can give to texts.

Wired to Care Oct 23 2019 In this essential and illuminating book, top business strategist Dev Patnaik tells the story of how organizations of all kinds prosper when they tap into a power each of us already has: empathy, the ability to reach outside of ourselves and connect with other people. When people inside a company develop a shared sense of what's going on in the world, they see new opportunities faster than their competitors. They have the courage to take a risk on something new. And they have the gut-level certitude to stick with an idea that doesn't take off right away. People are "Wired to Care," and many of the world's best organizations are, too. In pursuit of this idea, Patnaik takes readers inside big companies like IBM, Target, and Intel to see widespread empathy in action. But he also goes to farmers' markets and a conference on world religions. He dives deep into the catacombs of the human brain to find the biological sources of empathy. And he spends time on both sides of the political aisle, with James Carville, the Ragin' Cajun, and John McCain, a national hero, to show how empathy can give you the acuity to cut through a morass of contradictory information. *Wired to Care* is a compelling tale of the power that people have to see the world through each other's eyes, told with passion for the possibilities that lie ahead if leaders learn to stop worrying about their own problems and start caring about the world around them. As Patnaik notes, in addition to its considerable economic benefits, increasing empathy for the people you serve can have a personal impact, as well: It just might help you to have a better day at work.

The Future of Health-Care Delivery Dec 17 2021 Approximately 100,000 deaths per year in the United States result from preventable medical errors. This figure is about twice the number of people who die in car accidents and five times the number of murder victims annually, and twenty times the number of servicemen and women killed in Iraq and Afghanistan since the start of hostilities in 2001. If you think Americans have the best health-care system in the world, think again. In this deeply researched and controversial book, Dr. Stephen Schimpff explains why our health-care delivery system serves us so poorly, why it costs so much, and why government policy over many decades has not only failed to improve care delivery but has actually made it worse. In the process, he dispels common misconceptions about medicine and health care. *The Future of Health-Care Delivery* provides timely information and a road map to achieve world-class care delivery, putting health care where it belongs—in the hands of the patient and medical professionals instead of the insurance companies and government.

Gift of Life Sep 02 2020 Analyzing one of the

most dramatic of the new medical technologies--Organ Transplantation--*Gift of Life* covers those aspects that have general implications for public policy and sociological theory, and describes the social-psychological impact of kidney transplantation itself. *Gift of Life* begins with an examination of the overall, unresolved ethical issues related to kidney transplantation--the problem of selecting patients for a scarce therapy..., the problem of withholding treatment from patients of greater physical and psychological risk ... the issue of utilizing living related kidney donors vs. cadaver donors. The book concentrates on organ donors and their families, and studies the effect of this type of extreme altruism. It also examines the stress for the family as the members try to decide who, if anyone, will give a kidney. The work shows how individuals and families make major decisions under stress. Discussed in detail are family communication processes and emotional relationships between donor and recipient, as well as the impact of donation upon the family of the cadaver-donor. The final analysis deals with the health care delivery issues and the questions of funding created by the rapid rise of this new technology. *Gift of Life*, with its exposition of decision making communication, and reaction to stress, is of relevance to social science theory and policy.

Handbook of Gynecologic Oncology, Second Edition Oct 15 2021 While the medical literature abounds with information on gynecological cancer, this book winnows that volume of data into one manageable reference. In a practical and easy-to-use layout, the *Handbook of Gynecologic Oncology, Second Edition* provides a comprehensive and concise guide to the diagnosis and management of gynecologic cancer, including breast and colon cancers. Edited and written by the faculty of the gynecologic oncology programs of MD Anderson Cancer Center and Memorial Sloan-Kettering Cancer Center, this second edition reviews and updates various chapters. It includes a discussion of the new developments in management and a new chapter on germ cell and sex cord-stromal tumors. The text is aimed at fellows and residents in gynecologic oncology, radiation oncology and medical oncology as well as residents in obstetrics and gynecologic surgery and medicine. It will also be a handy guide for medical students and practicing physicians.

The Nation's Health Care Crisis Jun 23 2022

The last days of Pompeii ... Copyright edition May 30 2020

Mental Health Care and Social Policy May 22 2022 Originally published in 1985, at a time when the previous 2 decades had witnessed dramatic changes in the US mental health system. These included the decline of the state mental hospital, the birth of the community mental health center and the expansion of psychiatric services in general hospitals. The inevitable results of the changes were the creation of a huge nursing home population of the chronically mentally ill, and the multiplication of urban 'street people'. Mental health care is uncoordinated and underfunded. The historical roots of these problems are examined in this book which is designed both as a professional reference volume and as a text for students in the sociology of mental

health and illness. The contributors are drawn from diverse fields, including sociology, psychiatry, psychology, epidemiology and social history.

Health Care Will Not Reform Itself Dec 05 2020 Health care reform is within our reach. According to George Halvorson, CEO of the nation's largest private health care plan, only by improving the intent, quality, and reach of services will we achieve a health system that is economically feasible into the future. This year, Americans will spend 2.5 trillion for health services that are poorly coordinated, inconsistent, and most typically focused on the belated care of chronic conditions. What we have to show for that expenditure is a nation that continues to become more obese, less healthy, and more depressed. In *Health Care Will Not Reform Itself*, Kaiser Permanente CEO George Halvorson proves beyond a doubt that the tragically inconsistent care that currently defines the state of U.S. health services is irresponsible, irrational, but more importantly, fixable. With detail that might shock you, he shows why the nonsystem we now use is failing. Then, applying the same sensible leadership that makes Kaiser the most progressive health care organization in the world, he answers President Obama's mandate for reform with a profound incentive-based, system-supported, goal-focused, care-improvement plan. Halvorson draws from respected studies, including his own, and the examples of successful systems across the world to show that while good health care is expensive, it is

nowhere near as costly as bad health care. To immediately curb care costs and bring us in line with President Obama's projected parameters, he recommends that we: Take a preventive approach to the chronic conditions that account for the lion's share of medical costs Coordinate patient care through a full commitment to information technology Increase the pool of contributors by mandating universal insurance Rearrange priorities by making health maintenance profitable Convene a national committee to "figure out the right thing" and "make it easy to do" While this book offers sage advice to policy makers, it is also written to educate the 260 million stakeholders and invite their participation in the debate that is now shaping. What makes this plan so easy to understand and so compelling is that it never strays from a profound truth: that the best health system is one that actually focuses on good health for everyone. All royalties from the sale of this book go to Oakland Community Voices: Healthcare for the Underserved *Health Care in America* Oct 03 2020 "This pragmatic, objective approach to the complex issues surrounding the U.S. health care system successfully bridges the world of health economists/health analysts/policy makers with that of clinicians. Focusing on the main problems-escalating costs, limitations of access, and a wide variety of quality care-this unique book helps you better understand the rapidly changing and complex world of health care"-- Back cover.

United States Congressional Serial Set, Serial No. 14801, House Reports Nos. 805-811 Feb 07 2021 The Serial Set contains the House and Senate Documents and the House and Senate Reports. This volume includes House Reports from 107th Congress, 2nd Session, 2002. *Women, Work and Care of the Elderly* Aug 25 2022 First published in 1999, this book is based on social policy research, taking a particular view of the nature of social policy, one that focuses on the direct impact of all public policies on the welfare of citizens and which defines policy as inclusive of all areas of policy development and implementation. The view of policy which clients and customers provide is thus a significant dimension of social policy. The research is one of the few studies which focuses specifically on carers who are also in the paid work force and want to remain in paid work and to fulfil their caring responsibilities. An overriding concern of the research is how workplaces, government policy and community attitudes can be changed to foster a better and more supportive environment for workers who are caring. The research points to the need to change workplace policies and organisational cultures to confer legitimacy on the felt obligation and responsibility to care for older relatives. The responsibility of employers are explored and the knowledge, competencies and time management skills demonstrated in unpaid caring work are found to match the 'skill get' generally required of a modern manager, thereby offering important lessons for employer and employee alike.
