Seaforth World Naval Review 2014 Jul 10 2021
Since its launch in 2009 this annual has rapidly established a reputation as an authoritative but affordable summary of all that has happened in the naval world in the previous twelve months. It combines the standing features of regional surveys with one-off major articles on noteworthy new ships and other important developments. Besides the latest warship projects, it also looks at wider issues of importance to navies, such as aviation and electronics, and calls on expertise from around

the globe to give a balanced picture of what is going on and to interpret its significance. Special features for this year include a survey of current and future torpedo developments, an in-depth study of the Royal New Zealand Navy, a look at how the Royal Navy is coping after the Strategic Defense and Security Review, plus analyses of significant new warship classes: the Japanese Hyuga class DHH concept, the USNS Spearhead Joint High-Speed Vessels, Danish Iver Huitfeldt class frigates, and German AIP technology as demonstrated in the recent Type 212A submarines. For anyone with an interest in

contemporary naval affairs, whether an enthusiast or a defence professional, this annual has become required reading.

Million Cars for Billion People May 28 2020

Can one car transform a nation? The Ford Model T did do so a century ago when it replaced the horse, brought about a revolution in agriculture, became a stimulus to urbanization that eventually changed the landscape of America. Though the Maruti 800, the Tata Indica, the Hyundai Santro and the Maruti Alto, became engines of growth for India, these cars neither drove away the cow nor changed the way Indians travelled. Tata's Nano was expected to change all that and become the ultimate people's car, capturing the imagination of the middle class across nations and cultures. In spite of its petite dimensions, the Nano was meant to stand tall. Yet it did not. What caused it to fail and fall from grace despite being lauded as the 'right product at the right time' and 'the most

significant new car since the Ford Model T was introduced 100 years ago'? But is it really all over or is there still hope for India's 'little wonder'? What will the people's cars of tomorrow be like? A Million Cars for a Billion People delves into the questions, concerns and doubts, as well as the many misconceptions and myths, that have gathered momentum over the years about India's automotive history and the industry's mission to create a true 'people's car'. The very first cars that came to India; the early beginnings of the industry; the nascent history of the automobile across nations like Germany, France, US, the UK, Italy, Japan and South Korea, is narrated with authority and charm, from the viewpoint of the quest for the ultimate people's car.

The Big Roads Oct 13 2021 Discover the twists and turns of one of America's great infrastructure projects with this "engrossing history of the creation of the U.S. interstate system" (Los Angeles Times). It's become a part

of the landscape that we take for granted, the site of rumbling eighteen-wheelers and roadside rest stops, a familiar route for commuters and vacationing families. But during the twentieth century, the interstate highway system dramatically changed the face of our nation. These interconnected roads—over 47,000 miles of them—are man-made wonders, economic pipelines, agents of sprawl, uniquely American symbols of escape and freedom, and an unrivaled public works accomplishment. Though officially named after President Dwight D. Eisenhower, this network of roadways has origins that reach all the way back to the World War I era, and *The Big Roads*—“the first thorough history of the expressway system” (*The Washington Post*)—tells the full story of how they came to be. From the speed demon who inspired a primitive web of dirt auto trails to the largely forgotten technocrats who planned the system years before Ike reached the White House to the city dwellers who resisted the

concrete juggernaut when it bore down on their neighborhoods, this book reveals both the massive scale of this government engineering project, and the individual lives that have been transformed by it. A fast-paced history filled with fascinating detours, “the book is a road geek’s treasure—and everyone who travels the highways ought to know these stories” (*Kirkus Reviews*).

Transport and Climate Change Sep 19 2019 This topical volume covers the intersection between transport and climate change, with papers from the 'Transport & Climate Change' session of the RGS-IBG conference in London, September 2010. It considers the role of transport modes at varying spatial dimensions and a range of perspectives on the relationship between transport and climate change.

Carbon-Neutral Fuels and Energy Carriers Jan 24 2020 Concerns over an unstable energy supply and the adverse environmental impact of carbonaceous fuels have triggered considerable efforts worldwide to find carbon-free or low-carbon alternatives to conventional fossil fuels. Carbon-Neutral Fuels and Energy Carriers emphasizes the vital role of carbon-neutral energy sources, transportation fuels, and associated technologies for establishing a

sustainable energy future. Each chapter draws on the insight of world-renowned experts in such diverse fields as photochemistry and electrochemistry, solar and nuclear energy, biofuels and synthetic fuels, carbon sequestration, and alternative fuel vehicles. After an introductory chapter on different energy options in a carbon-constrained world and proposed measures to stabilize atmospheric CO₂, the book analyzes the advantages and challenges facing the introduction of hydrogen fuel to the marketplace. It then examines the role of nuclear power in the production of carbon-free energy and fuels as well as the efficient use and storage of renewable energy resources, emphasizing the production of solar fuels from water and CO₂. The book also discusses different aspects of bioenergy and biofuels production and use and the potential role of bio-inspired energy systems and industrial processes. The final chapters present a thorough overview and analysis of state-of-the-

art fossil fuel decarbonization technologies and clean transportation options. This authoritative work provides the information needed to make more informed choices regarding available clean energy and fuel alternatives. It helps readers to better understand the interconnection between energy and the environment as well as the potential impact of human activities on climate.

An Unworthy Future Jun 28 2020 It is difficult to find an area of public policy more plagued by misunderstanding than energy policy. Even

worse, every time the subject is raised, we are obligated to get mired in pointless arguments about the weather. This book helps set the record straight. Not convinced? Consider some of these inconvenient truths: The cost of green energy climate remediation is anywhere from 10 to 1,000 times greater than the damage from the climate change it attempts to alleviate. Obama's carbon tax would cost Americans \$1.2 trillion over just ten years, but would only reduce the midrange three-degree modeled twenty-second-century global temperature increase by 0.038 degrees Celsius. This is not another skeptical global warming polemic, but an economic evaluation of how and why green energy will fail. A thoroughly researched, heavily documented book by an expert in his field, it will demonstrate in meticulous detail how wasteful and economically inefficient Obama's green energy future will be compared to other worthy alternatives.

On a Global Mission: The Automobiles of General

Motors International Volume 3 Aug 31 2020
Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of

Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

Decision-Making Reform in Japan Aug 19 2019 In the election to the House of Representatives in 2009, the Democratic Party of Japan (DPJ) almost tripled the number of its lower house members by winning 308 seats. It subsequently formed a coalition government with the Social Democratic Party and the People's New Party. The new ruling party promised to completely overhaul policymaking mechanisms that had been shaped over the past decades. Yet, the Japanese people quickly felt disappointed with the DPJ's 'policymaking engineering'. Examining the evolution of the decision-making process in Japan under the DPJ administration between the years 2009-2012, this book offers a multidimensional explanation for the reasons for the DPJ's failure in producing

effective policymaking mechanisms. Implementing conceptual tools borrowed from historical institutionalism, the author explains why the Democrats displayed inflexibility in introducing selected elements of the Westminster system, incoherence in regard to many aspects of the decision-making reform, and unwillingness to take advantage of all of the institutional resources at their disposal. The book argues that the examination of the DPJ's origins and interactions with other parties is crucial in understanding its misconceptions regarding the institutional model, policy vision, and institutional tools required for a durable change in policymaking patterns. Illustrating its argument with a range of case studies, this book explains why, ultimately, the DPJ's concept of a politician-led government resulted in failure. It will also be helpful in understanding the prerequisites for the success of institutional reforms in general. As such it will be of interest to students and scholars of Japanese studies,

Political science, Asian studies.

Food Industry Wastes Oct 01 2020 Food Industry Wastes: Assessment and Recuperation of Commodities, Second Edition presents a multidisciplinary view of the latest scientific and economic approaches to food waste management, novel technologies and treatment, their evaluation and assessment. It evaluates and synthesizes knowledge in the areas of food waste management, processing technologies, environmental assessment, and wastewater cleaning. Containing numerous case studies, this book presents food waste valorization via emerging chemical, physical, and biological

methods developed for treatment and product recovery. This new edition addresses not only recycling trends but also innovative strategies for food waste prevention. The economic assessments of food waste prevention efforts in different countries are also explored. This book illustrates the emerging environmental technologies that are suitable for the development of both sustainability of the food systems and a sustainable economy. So, this volume is a valuable resource for students and professionals including food scientists, bio/process engineers, waste managers, environmental scientists, policymakers, and food chain supervisors. Provides guidance on current regulations for food process waste and disposal practices Highlights novel developments needed in policy making for the reduction of food waste Raises awareness of the sustainable food waste management techniques and their appraisal through Life Cycle Assessment Explores options for reducing food loss and waste along the entire

food supply chain.

The Dark Side 3 Feb 23 2020 This third collection of outstanding contributions from the Critical Management Studies (CMS) Division of the Academy of Management (AOM) continues to challenge business practice in ways not tackled by other more typical business case studies. There is a critical need for business educators to expose students and managers to the multifaceted phenomena of doing business in the twenty-first century; to support critical, reflective moral development; and to reflect and understand the complexities of organizational life. Is the system broken? Is there need for more systemic change? The cases explore a number of critical issues at some of the largest industries and companies in the world, including wealth creation and human rights in mining, the CSR approaches at Coca-Cola, the palm oil industry, and the supply chain at Apple Inc. Online Teaching Notes to accompany each chapter are available on request with the

purchase of the book.

The Transportation Experience Oct 25 2022
The Transportation Experience explores the historical evolution of transportation modes and technologies. The book traces how systems are innovated, planned and adapted, deployed and expanded, and reach maturity, where they may either be maintained in a polished obsolescence often propped up by subsidies, be displaced by competitors, or be reorganized and renewed. An array of examples supports the idea that modern policies are built from past experiences. William Garrison and David Levinson assert that the planning (and control) of nonlinear, unstable processes is today's central transportation problem, and that this is universal and true of all modes. Modes are similar, in that they all have a triad structure of network, vehicles, and operations; but this framework counters conventional wisdom. Most think of each mode

as having a unique history and status, and each is regarded as the private playground of experts and agencies holding unique knowledge, operating in isolated silos. However, this book argues that while modes have an appearance of uniqueness, the same patterns repeat: systems policies, structures, and behaviors are a generic design on varying modal cloth. In the end, the illusion of uniqueness proves to be myopic. While it is true that knowledge has accumulated from past experiences, the heavy hand of these experiences places boundaries on current knowledge; especially on the ways professionals define problems and think about processes. The Transportation Experience provides perspective for the collections of models and techniques that are the essence of transportation science, and also expands the boundaries of current knowledge of the field.

Good Governance and the Sustainable Development Goals in Southeast Asia Mar 06 2021 This book discusses management and

governance initiatives undertaken by agencies and stakeholders towards achieving the Sustainable Development Goals (SDGS) in the Southeast Asian region, specifically Malaysia, Indonesia, Thailand and Singapore. It highlights the theories, methodologies and action plans involved in implementing the goals in these countries and the importance of developing a positive relationship between the public and government agencies. With contributors coming from a range of disciplines and backgrounds across the Association of Southeast Asian Nations (ASEAN) region, this edited collection provides a holistic quantitative and qualitative approach to achieving the SDGs. In order to realise these development objectives, it argues that a strong understanding of the basic principles of governance across all levels is required, supported by effective citizen participation and conflict resolution. It provides a detailed overview of the importance of governance at the country level, addressing the

key elements of an integrated framework to support sustainable transitions. Regional case studies highlight processes and recommendations for improving governance and risk management and elevating citizen awareness and participation. Good Governance and the Sustainable Development Goals in Southeast Asia is a comprehensive and valuable companion for researchers, government agencies, and professionals with an interest in the SDGs in Southeast Asia and beyond.

Colombia Apr 07 2021 This paper on Colombia focuses on reforming energy pricing. Rising fiscal challenges in Colombia can risk derailing the government from their commitment to meet both its headline deficit target of 2.4 percent in 2019 and its structural deficit target by 2022, under the existing fiscal rule. The government is committed to embark on a reform strategy that aims at safeguarding the fiscal framework. Energy subsidy reform is one element of the government's strategy to address fiscal

pressures. Carefully designed reforms entail a gradual phasing out of subsidies in the case of fuel products and, in the case of electricity, an improvement in the targeting over the medium term. Illustrative simulations presented in this report highlight the fiscal and distributional impacts of different reform options. Simulations show that net fiscal gains could be achieved both for electricity and fuel products, while reducing distortions. The mission identified reform options to reduce energy subsidies while at the same time improve their targeting. The approach differs across sectors.

Lemon-Aid Used Cars and Trucks 2011-2012 Feb 17 2022 As Toyota skids into an ocean of problems and uncertainty continues in the U.S. automotive industry, Lemon-Aid Used Cars and Trucks 20112012 shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years. Lemon-Aid guides are unlike any other car and truck books on the market. Phil Edmonston, Canada's automotive Dr. Phil for 40

years, pulls no punches. Like five books in one, Lemon-Aid Used Cars and Trucks is an expos of car scams and gas consumption lies; a do-it-yourself service manual; an independent guide that covers beaters, lemons, and collectibles; an archive of secret service bulletins granting free repairs; and a legal primer that even lawyers cant beat! Phil delivers the goods on free fixes for Chrysler, Ford, and GM engine, transmission, brake, and paint defects; lets you know about Corvette and Mustang tops that fly off; gives the lowdown on Honda, Hyundai, and Toyota engines and transmissions; and provides the latest information on computer module glitches. Propulsion Systems Nov 21 2019 The transport sector is one of the most valuable sectors in the world. It represents the large oil consumers but still relies mainly on fossil fuels. Since the world

trend in fossil fuel use is expected to increase further, a more sustainable transportation system is unavoidable to cope with emerging economic and social issues, such as massive energy consumption and emissions of pollutant gases. In this regard, this book provides an overview of some recent and promising technological advancements in propulsion systems, ranging from on-board components to different propulsion system architectures. In particular, the book aims at giving a brief but significant insight into propulsion system design and architecture, by covering different topics and application fields (road, marine, and aerospace).
